FLORAL

AND

WESTERN CULTIVATOR'S GUIDE.

HOVEY AND NICHOLS,

57 STATE STREET, CHICAGO, ILL.

CHICAGO:

CHURCH, GOODMAN AND DONNELLEY, PRINTERS, 108 AND 110 DEARBORN STREET. 1868.

HOVEY & NICHOLS'

Annual Catalogue and Floral Guide and Circular,

Containing comprehensive descriptions of all the most desirable Flower and Vegetable Seeds, embracing the most choice assortments of German and French Asters, Zinnias, Stocks, Balsams, etc.

With all the latest novelties of our own selection and importation from the best leading European Florists and Cultivators, with directions for their successful culture. Also, a list of French Hybrid Gladiolus, and Summer Flowering Bulbs always in full supply.

Together with which, will be found our first Annual Descriptive Circular of Art Department, embracing a large range of rich gift goods for all occasions, and ornamental goods for the embellishment of the house, garden and lawn, of our own direct importation and purchase, from the best manufacturers of Europe and America, all of which may be found in unlimited variety at our Palatial Museum of Art and Horticulture, 57 State Street, Chicago.

HOVEY & NICHOLS.

PLEASANT WORDS

WITH

OUR PATRONS AND FRIENDS.

The Earth is clothed with God's mantle of the beautiful. "Consider the lilies of the field, how they grow; they toil not, neither do they spin, and yet I say unto you that even Solomon in all his glory was not arrayed like one of these." In the ermine fields of Winter, the vernal green of Spring; the radiant glories of early morning, the gorgeous spiendors of the evening Sun; the wave-lines of the mountains, the singing rivulets of the hill-side, or peaceful lakelet of the vale; the wondrous cloud-scape of the heavens or not less wondrous flowery meads of earth; in all is found the beautiful as it could alone come from the Infinite hand. With the Spirit of beauty brooding thus over all the handiwork of Deity, how meet is it that man should cherish the love for the beautiful implanted within him by the Supreme Creator.

From earliest time has man, according to his means and culture, given full scope to this attribute of his being, in the grouping of form and color in architecture, and its appropriate surroundings of garden, lawn, park or landscape.

In all the past, in the midst of the beautiful etherially hanging-gardens of the East, or the later gardens and parks of Europe, and, more recent still, in those of our own country, has man sought to rear untold splendors of architecture as found in Syria, Egypt, Greece, Rome, Europe, and the United States of the present day. But not content with this alone, his home has not been found complete until he has sought the accessories of art, the results of man's highest genius in painting and sculpture for its embellishment.

Young in years as is our American life, we have had a continent to subdue and life's material necessaries to provide ere the "Wilderness could be made to blossom."

In the recent years, however, there has been with us even, a great and rapid change in this respect, until, to a large extent, our private—Sovereign—country seats and city homes in their adornments and surroundings, have come to vie with the palatial magnificence of the older civilization of Europe which has there required the tedious growth of centuries.

In this enterprise, somewhat novel in its character, which this, our combined Catalogue and Circular represents, it has been our purpose

to group together the beautiful in nature and art,—the works of Man and God, appropriate to the adornment of home. Previously, as to business enterprises, the two have been separated, until their combination had come to be thought incongruous. But such is not our impression, and we are gratified in the unanimous verdict of the press and the public as to the happy success which has attended our endeavor.

Our Mr. Hovey has been long known as seedsman and florist at 194 Lake street, while our Mr. Nichols, late of Boston, during an extended tour of the past two years in Europe, has visited most of the leading florists and nurserymen of England and the Continent, and arranged for the direct importation of all their best material adapted to our climate. At the same time while visiting the museums, galleries and cabinets, public and private without number, -of painting and sculpture, and the palaces, parks and grounds of royalty and noblemen, he has sought out the Artists who have adorned them with costliest paintings, the Sculptors who have chiseled their finest marbles in statues, figures and fountains, the ingenious Artizans who, with cunning hands, from all materials in bronze and parian, iron, and terra cotta, in ivory and pearl, in crystal, and silver and gold and precious stones, in richly perfumed and inlaid woods, in beautiful Swiss carved brackets and wall ornaments, and all the multifarious works of virtu whereby home is sought to be rendered a paradise; and has not only arranged with many of these for the importation of their richest wares direct from their studios or manufactories to Chicago without the intervention of middle-men any where; but we shall continue to go out from time to time, as the business shall require, to personally attend to their selection and purchase, so that our friends and the public shall find at all times with us not only the most extensive assortment of these goods, but at prices below all competition, both for retail and wholesale purchasers. And in bringing these two departments together, we have named our place of business, which is of itself a commercial palace, a "Museum of Art and Horticulture," to be at all times free to the public, and where visitors will find a cordial welcome. Our ART GALLERY will at all times represent many of the leading artists of Europe and America, and will of itself be found an attraction which no visitor can fail to appreciate.

As an expression of public opinion of the value and success of our enterprise, we quote the following article from the *Chicago Tribune*.

It is but one of many such testimonials from the press of the North-west during the past few months:

CROWTH AND PATRONACE OF ART.

SUCCESSFUL ESTABLISHMENT OF AN ART EMPORIUM.

"Chicago has now reached a point where, as an assured metropolis of commerce, manufactures and influence, she can afford to devote much of her energy and wealth to the growth and culture of æsthetic tastes in her midst; and in her public and private buildings, their adornments and surroundings, to illustrate the taste for the beautiful in nature and art, which in all enlightened communities when prosperous, finds development

and patronage; and we are happy in being able to say that, one after another, places and methods are springing into being, in answer to calls of this nature from the public.

"We have alluded several times lately to one such center of attraction, which is a constant resort of those aware of its existence, who are wishing to make home within and without a paradise.

"We refer to the establishment of Messrs. Hovey & Nichols, State street, where, amid a singularly original, and yet most happy combination of the works of God and man, may be found a multitude of articles for the beautifying of house, garden, and lawn.

"This 'Museum of Art and Horticulture,' as it has been justly christened, meets a want long felt in our city—some place where a miscellaneous, yet full collection of choice works in nature and art could be found on exhibition and sale, as a permanent institution, and where, upon the honor, as well as taste, of the parties offering the goods, the public could rely, and which should contribute alike to the cultivation of the tastes, as well as supplying the wants of the community. We have been sufficiently familiar with a class of public sales, often by auction, of what has purported to be, art upon canvas, and in other forms; but whose pretensions often were but a fraud upon the purchaser, the vendors disappearing with the sale, though perhaps returning to repeat the imposition, after the lapse of time, or the rush of the holidays caused forgetfulness of the matter.

"The public will find in Messrs. H. & N. men of culture and experience, one of whom has spent the past two years abroad perfecting plans for the opening and future interests of this establishment, and both can be relied upon as offering only the best wares to the public. It is not now needful for those who wish to secure the beauties of nature in fruit or flower, or choice works in paintings, sculpture, or carvings, to go from our city to the East, or abroad, for them. As well, if not better, than at New York, Philadelphia or Boston, can be purchased, here, the production of American masters, the creations of European genius, and the handiwork of the Deity; and at prices, as we have heard some good art judges affirm, less than on the seaboard or even in Europe.

"It is the aim, and thus far the achievement, of this house, to furnish a selection of goods, rare and artistic, among which the most cultivated shall find a supply for their wants. The establishment is a source of pride to our citizens, and we trust will meet the appreciation and patronage it is justly entitled to from the community."

In this, our sixth annual Catalogue and Floral Guide, will be found a range embracing all the most desirable Seeds for Floral, Horticultural or Agricultural purposes. Together with valuable suggestions and information with reference to their successful culture.

PUBLICATIONS.

The leading Agricultural, Horticultural and Architectural Publications in supply at publishers' prices.

IMPLEMENTS.

Upon pages 105 and 106 will be found lists of Horticultural Implements, etc., always in full stock.

MISCELLANEOUS.

Upon pages 111-117 are lists of Aquarias, Aviaries, Plant Stands, Rustic Iron and Wood Chairs, Settees, Fountains, Statues, Terra Cotta, Ornaments, etc.

SEEDS BY MAIL.

Under the new postal law, seeds, cuttings, bulbs, etc., can be mailed in packages, not exceeding two pounds in weight, at the rate of "two cents for each four ounces or fraction thereof." This arrangement offers great facilities to persons residing at a distance, of procuring reliable and pure Seeds at a very trifling cost for transportation, as we will mail all orders for Seeds in papers or by the ounce (beans, peas, and corn excepted) amounting to one dollar or upwards, free of postage charges. When ordered by the pound or quart, eight cents additional per pound, or twelve cents per quart, must be added to the price of the Seeds.

ALL MONIES AT OUR RISK AND COST.

All monies forwarded by *Post Office Money Order*, draft on Chicago or New York, or by Express at our risk. Parties sending thus will deduct the cost of such draft or money order from the money sent. For money received by Express we will pay the cost here. Small amounts may be sent by mail.

ALL PACKAGES CUARANTEED A SAFE ARRIVAL.

The safe arrival and good condition of all packages of seeds forwarded, we guarantee in every instance. Upon the failure of any package to arrive in proper time, we shall be pleased to forward another on receipt of such information.

Parties sending us orders will please write their NAME, POST OFFICE AND STATE, distinctly, and such orders, accompanied with the money as designated above, will be faithfully and promptly filled in all instances.

DISTINCTNESS OF AN ORDER.

In writing their orders, if our friends will please write out each item separately, as indicated below, it will greatly facilitate the labor of filling orders in the busy season, when many hundreds are received daily. Thus:

1	paper	Sweet Alyssum	-	-		-	-	-	-	-		.05

DISCOUNT TO CLUBS.

Individuals or Clubs sending us orders for Flower or Vegetable Seeds by the packet, at Catalogue prices, will be entitled to a liberal discount, as follows:

For	1	dollar	sent	they	may s	select	Seeds	to	the	amo	unt	of	\$1.10
		dollars					6.6						2.25
6.6	3	66		66	6	6	46		£	6	66		3.45
66	4	66		44	6	6	66		6	6	= 66		4.70
6.6	5	6.4		66	6	6	66		6	٤	66		6.00
6.6	10	66		44	6	6	66		6	6	66		12.50
- 66	20	66		66	4	6	66		6	6	66		26.00

These will be put in one package and sent to one address, or we will mail them in separate packages, to the address of each individual of the club, as may be requested. This discount, however, does not apply upon Seeds by the ounce or pound, or bulbs, as it would bring them often at less than cost.

In almost all localities there are people of refinement and culture who take pleasure in the cultivation of flowers, and we trust that the above liberal terms will be an inducement for such to unite in sending us orders.

CLASSIFICATION OF FLOWERS.

Flowers usually grown from the Seed are classified as Herbaceous Perennials, Biennials, and Annuals.

HARDY BULBS, as Hyacinths, Tulips, and Crocuses, should be planted in the autumn.

TENDER, or SUMMER BULBS, like Tuberose, Tiger Flower, and Gladiolus, should be set out in the spring.

The Herbaceous Perennials are those whose stocks die to the ground in autumn, while the roots live and throw up stocks and flower stems from year to year. The *imperfect premids* are those whose roots die after three or four years, like the *Scort William*, unless they are divided from year to year, when they will continue to live and increase.

BIENNIALS flower the second, and even the third year, as the Hollyhocks. and then die. These may also be preserved by division of the roots.

Annuals flower the first season, and die after perfecting their Seeds. Many which are Annuals at the north, are Perennials or Biennials at the south: such as Verbenas, Marvel of Peru, etc.

As Annuals flower in a few weeks, and reliance can always be placed

upon their brilliancy of colors, they are always popular, and with proper arrangements may be kept in continuous bloom from June till frost.

Hardy Annuals, as Larkspur, Candytuft, etc., may be sown in autumn or early spring, in open ground. *Half Hardy*, as the Balsam and Marigold, may not be sown till danger of frost is past. The *Tender Annuals*, as the Cypress Vine and Sensitive Plant, require starting in hot-bed or greenhouse, and should not be set in open ground until warm weather.

FLOWERS FOR SPECIAL PURPOSES.

For constant brilliancy, the Aster, Delphinium, Balsam, Scabiosa, Salpiglossis, Stock, Antirrhinum, Dianthus, Pansy, Petunia, Phlox Drummondii, Portulaca, Double Zinnia, should have a place in all collections, Many others will be found in the Catalogue which we can not here mention.

For Masses of Color. The effect is often strikingly beautiful where entire beds are grown of the same color. The following plants are some of the most desirable for such purpose:

RED, and its various shades, Zinnia, Phlox, Petunia, Stock, Silene, Linum grandiflorum rubrum, Dianthus, Sweet Pea, Cacalia, coccinea.

White, Clarkia, Phlox, Sweet Alyssum, Candytuft, Sweet Pea, Portulaca, Stock, etc.

Blue, Whitlavia grandiflora, Nigella, Veronica, Syriaca, Myosotis, Larkspur, Sweet Pea, Nemophila insignis, Ageratum Mexicanum, Campanula, Gilia, Achillæfolia, Eutoca, etc.

Yellow, Dwarf Tropæolum, Eschscholtzia, Marigold, Calliopsis, Erysimum Arkansanum, Bartonia Aurea.

Flowers for Fragrance. For richness of perfume, Heliotrope, Stocks, Sweet Alyssum, Erysimum, Mignonette, and Sweet Pea, take the lead.

Frost-hardy Plants. Our autumnal frosts are seldom welcome to such as find a chief pleasure in the little world of beauty to be found in a tasteful flower garden. It is not pleasant to see the beautiful favorite flowers taking on the leaves of decay with the first frosts of September or October. But there are always a few, and some of them not the least desirable, which hold old Boreas at bay even as late as the middle of November. Among these are Japan Pinks, Bartonia Aurea, Dwarf Chrysanthemum-flowering Aster, Sweet-scented White Candytuft, Antirrhinum, Centranthus macrosiphon, Delphinum Formosum, Double Daisy, Erysimum, Malope, Gilias, Mignonette, Phlox Drumondii, Scabiosa, Lupins, Pansies, Stocks, Verbenas, Sweet Peas, Petunias, etc.

EVERLASTING FLOWERS, deservedly popular, and becoming every year more and more so, as nothing can be superior for holiday decorative purposes and festive occasions, as well as bouquets and floral ornaments for the winter. These will be found under their appropriate division.

FLOWERS FOR BASKETS. Sweet Alyssum, Mignonette, Loasa, Fenzlia, Leptosiphon, Mimulus, Tropæolum, Nemophila, Lobelia, Abronia, and others.

CLIMBING PLANTS. What can be more beautiful than nature's own drapery, where places otherwise unsightly are rendered fit for fairy bowers

by their delicate climbers and trailing vines. Fences, buildings, etc., may oftentimes be thus screened, or even rendered pleasing by nature's own climbing annuals. Among the best are Loasa, Dolichos, Convolvulus, Ipomea, Gourds and Cucumbers (ornamental), Sweet Peas, Calampelis, Scabra, Cobea Scandens, Phaseolus Ensiformis Giganteus, etc.

ORNAMENTAL-LEAVED PLANTS have come to have a world-wide popularity. Among the best are Ricinus (the tallest from 3 to 8 and 10 feet), Amaranthus, Canna, and Perilla Nankinensis. The effect is best when grown in groups of several colors, say six or more. The tallest should be in the center.

Plants for Summer Hedge. There is nothing that will make a prettier low hedge for purposes of beauty or a screen than the Sweet Pea, when supported upon low brush early and properly set. The seed should be sown at a depth of not less than four inches early in the spring, and the earth should be kept well hoed up to the stocks through the season. This will ensure in a rich soil an exuberance of flowers, and a beautiful hedge of three to four feet in height. The Amaranthus also makes a fine hedge of rich dark foliage, some varieties of which furnishing two and even three colors. The Double Zinnia is also desirable, as well as Delphinium cardiopetalum, of about two feet in height. Most of the tall growing plants are suitable.

Bulbs and Tubers, for spring planting. Among them, the Gladioli, being the first and best, will be found under their appropriate head in the Catalogue.

Suggestions as to Seed Sowing, Transplanting, etc.

It is not our province anymore than it comports with our spirit, to decry those of our own or any other profession; but we know there are those engaged in the Seed business who dishonestly palm off upon the public poor and worthless Seed purchased for little or nothing, and sell the same as good. For ourselves, our Seed coming to us direct, as it does, from the best and most reliable growers of Europe and America, which we spare no necessary expense to obtain, we know it to be good Seed, and under all properly favoring circumstances it can not often result in disappointment. It does not require much trouble, however, to destroy even the best, and it requires, to make a successful cultivator of Seeds, to understand their nature and the conditions requisite for their growth. This can not be had without careful observation, general reading, and much pains-taking. We copy from the "Town Garden," an English publication:

"Purchase of Seeds.—It costs as much trouble to grow flowers from bad seed as from good, and whoever takes the trouble should make sure of seed that will be worth it. The stuff sold at little seed shops is generally only good enough for the birds, and all the skill in the world would be exercised in vain upon it, with a view to getting good flowers. Some of the common kinds are pretty sure to be good, no matter where you get them; but Asters, Stocks, Balsams, Zinnias, and others prized for their high coloring and distinctiveness of habit, should be purchased at none but first-class houses. The seed of choice flowers is saved with as much care as gold dust—for it is gold dust in another form—by all the leading growers. The plants for seed are picked with the greatest care; and as the best flowers produce the

least seed, and single colorless and ragged ones plenty, that which is skillfully saved is valuable to a grain, and the rubbish is valuable only in pounds and bushels. All sorts of tricks are practiced upon seeds. Good seed is purchased at a fair price, and mixed with the worst to increase its quantity, so that in a packet of some hundreds there will perhaps be only half a dozen worth the trouble of culture, and you can not know it till your trouble is nearly over, and the plants are in bloom; then you are dismayed to find only one in fifty worth looking at. Asters, Stocks, and Balsams have been brought to such high excellence by careful culture and skillful saving of the seed of the best flowers, that those who grow from penny and twopenny packets have no idea of the beauty of the flowers which may be secured from a pinch of first-rate seed. Asters are now to be had of the size and fullness of Dahlias, and of all shades of color. Balsams the same. Stocks of the best kinds produce grand pyramids, equal to the best Hyacinths; and all the leading annuals are saved in distinct colors, so that the grower is in no quandary as to what the tints will be, if the seeds come from a first-rate house, and are sown separate as received, and with tallies to distinguish them. There is an immense trade carried on in penny packets of dead or worthless seeds in London, and that is one reason why the London people are so far behindhand in the growth of flowers. As a rule, never save seed of your own growing; you can buy for sixpence what it will cost you five shillings in trouble to obtain; and there are a hundred chances against your saving a single pinch that shall be worth the paper you wrap it in."

Preparing the Ground. For flower, as for all other Seed, the deeper and more mellow the soil, the better—say to the depth of twelve to eighteen inches. Where it is clayey and will not pulverize finely, sand should be added. And if not naturally rich, it should be made so by free use of compost, which may be produced in any quantity by accumulating turf from the roadside, and throwing upon it the soap suds, slops, etc., from the house, adding, in the autumn, fallen leaves; and when well rotted the most desirable manure is produced for floral cultivation. Your garden should be well drained so that water may not remain upon the surface, rendering the soil sour, and destroying the vegetation of Seeds and delicate plants.

Sowing Seeds. Throughout our Catalogue, in connection with the various kinds of Seed, suggestions and instructions are given, which, if carefully followed, together with the foregoing, will in most instances result in gratifying success. The conditions of successful growth are good Seed, and light, loose, well pulverized soil, moderately enriched, with slight moisture and warmth. These conditions may generally be had in sufficient degree for the culture of most of our Floral and Garden Seeds. Some years, however, the season will be attended with such a succession of cold rains or frosts, even after the proper time for sowing Seed, that, being sown, it will not germinate and is destroyed. Again, there are many of the products of the flower and vegetable garden which may be brought to maturity earlier in the season than our northern climate would otherwise admit of, by the use of hot-beds. These may be easily and cheaply constructed by boards set edgewise upon the ground, so as to form a low box, one side of which shall be a few inches lower than the other. This, covered with glass, slightly inclined towards the South, so as to shed the rain, will retain the moisture arising from the earth, and the air within being kept humid, and not subject to atmospheric changes, seed will soon germinate, producing plants for transplanting as soon as the season will admit of it. The hot-bed is constructed by the use of horse manure and bedding straw or leaves to the depth of thirty to thirty-six inches, well shaken together.

This should be placed in a trench from twelve to eighteen inches in depth for convenience, or it may be made upon the surface. Upon this let there be a layer of say from four to six inches of fine soil; place the frame over it, and close till fermentation takes place and the soil is quite warm. After waiting say two days, sow the seed. The heat thus generated will keep the loam of the bed properly warmed, and result in rapid germination and growth. Care must be taken, however, to admit the air freely by raising the glass or in obstructing the sun's rays, or the heat, which from the combined effects of the sun and the hel, becoming intense, will destroy the young plants. As the spring advances, and the sun gets warm, a coat of whitewash upon the class will slightly shade the vegetation within, and then, with sufficient air through the middle of sunny days, the growth will proceed finely.

SEED BEDS. Where appliances as above are not readily to be had, prepare a bed of light mellow soil, with a sunny, sheltered exposure, and when the ground has become well warmed and the weather settled, sow the Seed with great care, and where they are very fine, sift the earth upon them. A rule, perhaps, as nearly right as any general rule may be for the purpose, is to sow the Seed at a depth equal to twice its diameter. For instance, if the Seed be one eighth of an inch in diameter, it should be covered to the depth of one fourth of an inch, etc.

Seeds may be successfully started in shallow boxes (which are better than small pots, the earth in which dries quickly), placed in the window, and when other conveniences are not at hand, this answers a good purpose in securing early plants for transplanting.

Transplanting. When plants have obtained their second leaves, and a growth of say one or two inches, they are ready for removal to the growing beels or borders in the garden. A cloudy day, with warm showers, is best for this purpose; otherwise the tender, newly removed plants may require shading. An hour or so previous to removal, wet down the plants thoroughly, and also the ground to which they are to be removed. Make use of a long, narrow trowel, for transplanting, being careful to disturb the roots as little as possible. To this end, the seed should be sown thinly, that the plants may not come up too near together. If too thick, there should be a portion removed. Poppies, Larkspurs, and other like plants, with long tap-roots, should be sown where they are to grow, as they will not well bear removal. So with Candytuft, Sweet Peas, and similar flowers, which do best when sown as soon as the condition of the ground will admit, should be sown so as not to be removed.

COLLECTIONS OF CHOICE VARIETIES.

For such as may desire a complete assortment of any particular description of flowers, we have put up in neat Seed packets separate collections of Seed, embracing in each a fine selection, as follows:

А сноісь	SELECTION OF	F ASTERS, best kinds S	\$1.00

" 4 "	"	"	5.00

AND NOW, TO ALL OUR PATRONS.

-success attend you in any and all endeavors you may care to make in the culture of your own love for the beautiful in the world of flowers or the production of the rich delicacies of the kitchen garden. May your highest anticipations in this respect be fully met. But even with intelligent and greatest care, and most patient labor on your part, and the utmost faithfulness on ours in providing ourselves, without regard to cost, and furnishing only the choicest and best Seed, grown only by those who have by long experience been proved to be the best and most carefully conscientious Seed-growers of the world; even then there will be some, a very few, perhaps a half dozen in a thousand, who will be unsuccessful in their attempts. Some others may find disappointment, because their expectations were not just. Regardless of our Catalogue descriptions, they have looked, perhaps, to the Marigold or Calceolaria for the strength, and size, and brilliancy of the Dahlia or Aster. Again, there are flowers which we advertise as double, as the Stocks, Zinnias, etc., and if a small proportion of them prove to be single, you must know that it is of nature's own capriciousness, and not our dishonesty. Pear Seed will always grow Pear Stocks, but it does not follow that a particular variety of Pears, as the Bartlett, for instance, will always grow Bartlett Stocks; on the contrary, it will be likely to grow several varieties; and were it not for this, the innumerable and beautiful varieties of fruits and flowers could not be had. So when having sown the Seed for rich double flowers, and expectation is high for a luxuriant growth of the same, and a few single ones show themselves, pull them up as soon as their character is indicated, and rejoice in those which have met your expectations, instead of bestowing maledictions on those who have innocently and in the utmost good faith failed to meet your unjustifiable expectations.

THE

WESTERN FLORIST'S GUIDE FOR THE GARDEN.

FLOWER SEEDS.

ABRONIA UMBELLATA.

ABRONIA. NAT. ORD., Nyctaginiaceæ.

A charming plant, with verbena-like heads of sweet-scented flowers. Very effective in beds, rock-work, or in baskets suspended in a conservatory; growing freely in any light, rich soil, and flowering from August to October.

NO.

1 Abronia Umbellata, resy-lilac, half-hardy annual; from California. Half ft. high \$9.19

ABUTILON. NAT. ORD., Malvacea.

These flowers are extremely beautiful for the conservatory; they are natives of Brazil, and half-shrubby, with vine-like leaves and bell-shaped flowers, being richly veined and striped, of a wax-like appearance. Many of the varieties succeed well in the open ground during the summer. Half-hardy.

NO.		RICE
2	Abutilon Alphonse Karr. Orange, veined with crimson. Very fine. 5 feet .	.25
- 3	- Duc de Malakoff. Yellow, veined with maroon. Very fine. 6 feet	.25
4	Hammer Hybridum. Lemon-color. 5 feet	.25
	- Marmoratum. A beautiful variety, flowering in great profusion all winter	
	producing pure white flowers, veined and marbled with bright rose. One of the	
	best. 6 feet	.25
6	Mixed	.25
	ABOBRA. NAT. ORD., Cucurbitacea.	
	A rare and extremely pretty tuberous perennial climbing Cucurbitaceæ, with elegant	t
	cut glossy dark-green foliage, and small oval vivid scarlet fruits. Suitable for planting out during summer, forming beautiful garlands.	5
197	41.1 72110	. 25
•	Abbora Viraipora	. 20
	ACANTHUS, NAT. ORD., Acanthacea.	
	These deserve a place in every collection, from their stately appearance, and the	
	legend of their leaves having given the first idea of the capital of the Corinthian order	
	of architecture. They require a good sandy loam, and plenty of room. Hardy perco-	
	nials.	
8	Acan hus Mollis. White; from Italy. 3 feet	.05
	- Spinosus. White; from Europe. 3 feet	.05
	ACHILLEA. NAT. ORD., Compositæ.	
	Belonging to the genus known under their English name of Milfoil. Hardy perennial.	
10		.05
	ACROCLINIUM. NAT. ORD., Composite.	
	An elegant new annual from Swan River, producing beautiful everlasting flowers	S
	resembling the Rhodanthe Manglesii, but much larger; should be grown in every col-	-
	lection; fine for winter bouquets, flowering in any garden soil. Hardy annuals.	
11	Acrolinium Atroroseum. Deep rose-color. 1 foot	.10

ANTIRRHINUM, OR SNAP-DRAGON.

See page 61.

PRICE

ASTER. NAT. ORD., Compositor.

This splendid class of plants is not only one of the most popular, but also one of the most effective, of our garden favorites, producing in profusion flowers in which richness and variety of color are combined with the most perfect and beautiful form; it is indispensable in every garden or pleasure-ground where an autumnal display is desired. For flower-beds and mixed borders it stands unrivalled.

The Aster may be divided into two grand sections,—French and German. The French, as improved by Truffaut, has flat petals, either reflexed or incurved, the former resembling the Chrysanthemum; whilst the latter, by turning its petals towards the centre of the flower, forms, when well grown, a perfect ball, and is best described by its resemblance to the Peony. The German varieties are quilled; and the most perfect flowers are surrounded by a circle of flat or guard petals, as in the Hollyhock. The flowers of these are particularly admired for the exquisite symmetry of their form. The dwarf-bouquet varieties of this beautiful germ grow from nine to fifteen inches high, and are particularly adapted for small beds, edging, or for pot-culture. They often flower so profusely as entirely to hide their foliage. All the varieties delight in a rich light soil, and, in hot, dry weather, should be mulched with well-rotted manure, and frequently supplied with manure-water. This labor will be amply compensated by the increased size, beauty, and duration of the flowers. Half-hardy annuals.

85 Aster French Peony Perfection, representing the greatest perfection in form,	
size, and fulness of flower of the Peony class. In this variety the petals	
are turned towards the centre, and a flower not quite in full bloom:	
resembles a ball; but few side flowers; a beautiful variety of colors;	
mixed. A foot and a half	
86 - Truffaut's French Peony-flowered. Grown by Truffaut, the cele-	
brated florist of Versailles, France. Acknowledged by all to be one of the	
best, in all respects. Twenty colors, mixed	
87 - Dwarf Large-growing Peony. About half the size of the Peony	
Aster; habit fine; pyramidal; flower, splendid, large and very double, in	
the way of the Peony, perfection. All colors, mixed	
88 — Crown-flowered, or Cocardeau. The flowers of this variety have	
large white centres, surrounded by scarlet, carmine, violet, blue, and	
many other colors. Flower large and double; all colors, mixed10	
89 — Chinese. The variety most commonly grown. Mixed	
90 - Original Chinese, with Folded Petals. Two colors, mixed. The petals	
of this variety are folded in their length; the flowers are of an unusual	
size, from three to four inches in diameter; present the most striking	
colors of all Asters; plants tall; wide-spreading branches, and of a very	
curious and original aspect. New	
91 — German Dwarf. This is a fine variety, growing only three-quarters foot	
high; flowers similar to the double-quilled; good form; an abundant	
bloomer. All colors, mixed	
92 - Bouquet Pyramidal. The flower of this variety, when well grown,	
forms a complete bouquet of itself, the flowers completely hiding the foliage,	
and often numbering from one hundred and fifty to two hundred to a single	
plant. All colors, mixed	
93 - Dwarf Chrysanthemum-flowered. This is a valuable late variety,	
coming in after many other varieties are gone. They grow very uniform	
in height. The flowers are from three to four inches in diameter, blooming	
so profusely as to completely hide the foliage; very good for pot-culture;	
splendid mixture	
94 - Peony-Globe. A very early variety, of branching habit; color very distinct,	
and flower double. Mixed	
95 - Pyramidal. This is a very popular variety of the Aster, growing very	
uniform in height and shape. The form of flower resembles an inverted	
pyramid. Some are quilled, others not: a fine mixture	
96 - Globe-quilled. This is a fine old variety. The flowers are formed in the shape	
of a half-ball. Mixed	
97 — Giant Emperor. This is a comparatively new variety. The flowers are very	
double, and of immense size. It does not flower so freely as many other	

varieties. In favorable cases it produces four to six flowers, of which the

	ICE
chief blossom is often four inches in diameter; a good variety of colors.	~~
Mixed	.25
growth, with medium-sized flowers of the most prefect form, very double	
and densely imbricated. Six colors mixed ,	.10
99 - Porcupine, or Hedgehog. The flowers are composed of long, quilled,	
curious-looking petals: hence the name. Mixed	.10
100 - Reid's Improved Quilled. One of the finest quilled varieties. Mixed	.10
101 - Ranunculus-flowered. This is a small flowered variety, very double,	
imbricated, surrounded by a range of green leaves; not quite as showy as	
many other varieties, yet we consider it quite an acquisition; valuable for	10
bouquets. Finest mixed	.10
of robust growth, fine habit, and profuse bloomers. The flowers are as	
large as Peony Asters, beautifully imbricated, of oval form, and very	
double. In habit, height of plant, and form of flower, intermediate between	
the Tall Chrysanthemum and Peony Perfection Asters, and which will	
become a favorite class. The colors are carmine, carmine and white, dark-	
blue, deep-lilac, deep-purple, deep purple-white, bright crimson tipped	0=
with white, white tinted blush, crimson, and crimson and white. Mixed.	
103 — Dwarf Turban, or Chessboard. Leaves of dark-brown tint, with flowers of a deep rose with white; an interesting species	.25
104 — Victoria. This beautiful kind forms a new class, allied to the Giant Emperor,	. 20
but superior to that in habit of plant and form of flower. The plant is very	
robust, about one and three-quarters feet in height, bearing itself without	
assistance of a stick, forming a handsomely branched compact bush,	
crowned with from ten to twenty large and smaller flowers, half of them	
of the size of the largest Giant Emperor Asters, which are of a beautiful	
globular form, regularly imbricated. It has, besides, the great superiority over the Giant Emperor Aster of being perfectly constant in height, and	
	.25
Persons wishing any of the above Asters in separate colors are referred to the collec-	
tions under the head of Assortments.	
ANTHANASIA. NAT. ORD., Composite.	
105 Anthanasia Annua (African Daisy;) yellow; from Barbary. Hardy annual.	
1 foot	.10
AUBERCINE (EGG-PLANT.) NAT. ORD., Solanaceæ.	
The varieties enumerated are the eatable fruited kinds so extensively grown about our	
cities. The white and scarlet are sometimes grown in pots, and are very interesting, being covered in autumn with beautiful egg-shaped fruit. The scarlet variety is a great	
novelty. They succeed in a warm southern location. Half-hardy annuals.	
106 Aubergine, White-fruited. From France. 14 feet	.05
107 — Purple-fruited. Large; from France. 11 feet	.05
108 — Scarlet-fruited. Very striking and handsome; from France. 1 ft	.10
109 — Striped. New, very ornamental; from Guadeloupe. 11 feet	.10
AURICULA. NAT. ORD., Primulacea.	
A well-known garden favorite of great beauty, succeeding best in a northern aspect.	
Half-hardy perennial. 110 Auricula Alpine. This is the most hardy of all the Auricula. Mixed	.10
111 — Extra German. Saved from German prize varieties. Mixed. Half foot	.25
112 — English Prize. From named flowers. Half foot	.25
•	
AZALEA. NAT. ORD., Ericacea.	
Beautiful flowering plants, requiring very careful treatment. All the species should	ı

	CAMPANULA. NAT. ORD., Campanulacea.									
	The Campanulas are strictly biennial plants by pot-culture, and, without exception, some of the finest of all garden plants for decoration in conservatory, greenhouse, and flower-garden. By good culture in pots, the tall varieties assume a magnificent effect, attaining five to seven feet or more in height, with lateral flower racemes from the base, four to five feet in length. The beautiful white variety forms a most striking contrast. By good arrangement, a rich and imposing effect can be formed, altogether unequalled by any other plants.									
175	Gampanula Loreii. Fine, with large, expanded blue blossoms, which c	ontinue								
	to be produced in succession through the summer; will grow in almost any situation; should be well thinned, so that the plants will be eight or ten inches									
-4 NV 0	apart; desirable for edging, or bedding, en masse. Half foot		\$.05

	CANNA (Indian Shot.) Nat. Ord., Marantacea.									
These stately species of plants are highly ornamental in flower-gardens, producing a rich and Oriental effect by their large, broad, massive foliage, and rich crimson and scarlet flowers. Though perennial, if sown early, they will make luxuriant growth, and bloom the first season. In late autumn, they should be carefully potted, and allowed to mature their bloom in the greenhouse or parlor, and afterwards preserved in a cool, dry cellar. In spring, again start them into growth, and replant them in the open air last of May or first of June. Before sowing, soak the seed in water at 125° for about twelve hours.

342 — Rosea. Rose-color	05
DAHLIA. NAT. ORD., Compositæ.	
A noble autumn-flowering plant. The seed offered by us has been saved from one the best prize collections. Half-hardy perennial.	of
343 Dahlias, Good Mixed. A fine assortment of colors	10
344 — Extra Fine. Saved from a choice prize collection	25
	25
DAISY. NAT. ORD., Compositæ.	
(See Bellis Perennis.)	

DATURA. NAT. ORD., Solanacea.

A tribe of highly ornamental plants, producing large, sweet-scented, trumpet-shaped flowers of the most attractive character, and succeeding in most any rich soil. The roots may be preserved in and through the winter in a dry cellar. Half-hardy perennials.

NO. PRICE
346 Datura, Wright's, or Meteloides (Datura Wrightil.) A beautiful plant, pro-
ducing flowers which are of extraordinary size, pure white at the centre, and
passing imperceptibly to a lilac-blue at the border. The roots can be taken up
in the autumn, and preserved through the winter, in the same manner, as the
Dahlia. 2 to 3 feet
DELPHINIUM. NAT. ORD., Ranunculacea.
A highly ornamental genus of splendid profuse-flowering plants, of an unusually high
decorative character. When planted in large beds or groups, their gorgeous spikes of flowers, of almost endless shades, from pearl-white to the very richest and deepest blue, render them the most conspicuous and striking objects in the flower-garden or pleasure-ground. They delight in a deep, highly enriched soil. With the exception of Delphinium Cardiopetalum, they are all hardy perennials.
347 Delphinium, Chinese. Finest mixed; one of the most desirable of the tribe. 21 ft05
348 - Cardiopetalum. Deep-blue; heart-shaped. Hardy annual; from Pyrenees.
1 foot
349 — Cælestimum Grandiflorum. Celestial blue; long spikes: very handsome.
3 feet
350 — Elatum (Bee Larkspur.) Blue. 3 feet
351 - Formosum. New flowers; large color; exquisite blue, with white; will flower
the first season from seeds; finest of the tribe. 2 feet
352 — Grandiflorum. Dark-blue; fine
353 — Hybridum. Fine mixed. 3 feet
355 — Iveryanum. Deep-blue; extra. 8 feet
357 — Punicea. Reddish-purple. 3 feet
358 — Wheelerii. Fine-blue. 3 feet
359 — Hendersonii. Splendid, large blue flowers; extra fine. 21 feet
360 — Atroviolaceum. Dark-violet
DICITALIS (FOXGLOVE.) NAT. ORD. Scrophulariaceæ.
The Digitalis are too well known to need description. They are all useful and orna-
mental for general flower-garden purposes, and may be introduced into the shrubbery with fine effect, as their tall, spire-like spikes, crowned with their large thimble or bell-shaped flowers, will contrast finely with the green foliage of the shrubs. They are all hardy biennials, from three to four feet high.
361 Digitalis, Good Mixed. A fine assortment of colors
362 — Extra Mixed. All the newest kinds. 3 feet
363 — Grandiflora. Large-flowered; yellow. 3 feet
364 — Purpurea. Common purple variety. 8 feet
365 — Alba. Pure white. 3 feet
366 — Ferruginea. Brown. 2 feet
367 — Aurea. Golden. 3 feet
368 — Lutea, Yellow, 8 feet
369 — Gloxinoides. New and beautiful gloxinia-shaped flowers; extra spotted. 3 ft10
370 — Cantua. White, tipped with black
371 — Hybrida. Pink; new and fine
DIDISCUS. NAT. ORD., Umbellifera.
372 Didiscus Cærulea. Blue; a distinct and elegant plant; from Australia. Half-
hardy annual. 1 foot

DIANTHUS. NAT. ORD., Caryophyllacece.

A magnificent genus, which embraces some of the most popular flowers in cultivation The Carnation, Picotee, Pink, and Sweet William, all "household words," belong to this genus. The Chinese varieties may be considered the most beautiful and effective for our hardy annuals; the double and single varieties, with their rich and varied colors, in beds or masses, are remarkably attractive; while the recently introduced species, Dianthus Heddewigii and Dianthus Laciniatus, with their large and rich-colored flowers, three to four inches in diameter, close, compact habit, and profusion of bloom, are unsurpassed for effectiveness in beds and mixed borders.

NO. PRICE	
377 Dianthus Chinensis, Fine Double, Mixed. Selected from finest double	
flowers	
378 — — Alba. Double-white; very fine	
379 — Marginata. White and rose-striped	
380 - Albus Pictus. White-marbled, with rose; beautifully fringed. Hardy	
annual	
381 — Heddewig's. A most beautiful new variety. The whole plant is scarcely	
one foot high, and very bushy; whilst always thirty or forty flowers are at once	
in blossom. The flowers are very large, from two to three inches in diameter,	
of a most beautiful shape, and of a variety and brilliancy of colors quite unsur-	
passed in pinks, from white mottled with rose, and purplish-red, with dark	
centre, to velvety carmine crimson, dark blood-red, and mottled and shaded	
with maroon and velvety-black. Hardy annual	
382 — Heddewig's, New Double. A new variety of this splendid new Pink,	
having beautiful double flowers, instead of the single. Hardy annual	
383 — Laciniatus. A beautiful variety. The colors are pure white, flesh, rose,	
various shades of red, carmine, violet, purple, and rich maroon; some being	
Belfs, others striped and spotted; all very delicately cut or fringed. Hardy	
annual	
384 — Laciniatus, fl. pl. A double variety of the preceding; very fine25	
385 — Imperialis, fl. pl. Mixed; a fine double variety; annuals; from China	
387 — Rubra. Pink; very fine; hardy perennial	
389 — Hybridus Corymbosus. A beautiful new hybrid; large double flower10	
390 — Moschatus (double garden-pink.) Finest double-mixed; hardy perennial10	
391 — Plumarius (Pheasant-eye Pink. White or pink, with dark eye. The flowers	
are deeply fringed, or feathered; very fragrant. Hardy perennial	
392 — Veitchii (Veitchs Hybrid). Beautiful cluster of flowers; pure white, with	
crimson centre. Hardy perennial	
393 — Dunnetti Superba. A beautiful hybrid variety, with corymbs of very rich	
dark-crimson flowers. 1 foot	
394 — Garnierianus (Garnier's Pink). A beautiful upright-growing variety, flower-	
ing freely through the summer; mixed colors. 11 feet	
395 - Guttatus. Red and white; very dwarf; fine for edgings	
396 — Incarnatus. Rich crimson-scarlet	
DODECATHEON (AMERICAN COWSLIP). NAT. ORD., Primulacea.	
397 Dodecatheon Media. A pretty little border-plant, with flowers similar to the	
Cyclamen; mixed; red and white. 1 foot	
DOLICHOS (HYACINTH BEAN). NAT. ORD., Leguminosæ.	
Beautiful climbing-plants; flowers in clusters; treatment much the same as the com-	
mon bean. Tender annuals.	
398 Dolichos Lablab. Purple; from East Indies	
399 — — Alba. White; from East Indies	
100 — — Mixed. The above varieties mixed	
101 — Giganteus. A hardy ornamental climber; from East Indies	
DICTAMNUS (FRAXINELLA). NAT. ORD., Rutacea.	
A very fine hardy perennial. The leaves have a very pleasant smell, like lemon-peel, when rubbed. The seeds often remain in the ground several months before vegetating.	
102 Dictamnus Alba, White; from south of Europe. 2 feet	
103 — Rubra, Crimson; from south of Europe. 2 feet	

ECCREMOCARPUS. NAT. ORD., Bignoniacea.

(See Calampelis Scabra.)

ECC PLANT. NAT. ORD., Solanacea.

(See Aubergine.)

CANARY BIRD FLOWER.

See page 22.

RI	

ERYSIMUM. NAT. ORD., Cruciferæ.	
Very showy, free-flowering, handsome hardy annuals; very effective in beds, mixed borders, or ribbons; succeed in any light, rich soil. Hardy annuals.	
404 Erysimum Arkansanum. Sulphur-yellow; very handsome; from North Amer-	
ica. 14 feet	
405 — Barbarianum Variegatum. Yellow foliage, prettily variegated. 14 feet .10 406 — Peroffskianum. Orange; very showy; from Palestine. 14 feet05	
ERICA (HEATH). NAT. ORD., Ericacea.	
A well-known genus of extremely beautiful and interesting plants, flowering most pro- fusely, and especially effective from their compact, close habit of growth. Both the hardy and greenhouse varieties require a sandy peat.	
407 Ericas, Finest Mixed. A choice selection; from Cape of Good Hope. 2 feet25	
ERYTHRINA. NAT. ORD., Leguminosa.	
A magnificent genus of half-hardy shrubs, with fine leaves, and beautiful, brilliant scarlet flowers, borne on spikes from one to one and a half feet long. They may be taken up in the fall, and kept in perfect preservation during the winter in a dry cellar, the roots covered with half dry earth; when taken up, the branches should be well cut back, say to within four inches of the previous year's growth. Plant them out in May, and they will flower beautifully three or four times in the course of the summer.	
408 Erythrina Corallodendron (Coral-tree). Scarlet; from West Indies. 10 feet .25	
409 — Hendersonii. Scarlet. 4 feet	
410 — Laurifolia. Scarlet; from South America. 4 feet	
411 — Crista Galli. Scarlet; from Brazil. 10 feet	
ESCHSCHOLTZIA. Nat. Ord., Papaveracea.	
Annual plants, with showy flowers; natives of California; on which account, the first species introduced was called the California Poppy; exceedingly profuse, blossoming from June until frost. Hardy annual.	
412 Eschscholtzia California. Bright yellow, with rich orange centre; from Califor-	
nia. 1 foot	
412 — Compacta. Yellow and orange; from California. 1 foot	
415 — Alba. White; from California	
416 - Tennifolia. Primrose, with orange centre; very compact; from California.	
1 foot	
EUCHARIDIUM. NAT. ORD., Onagracea.	
Exceedingly pretty; profuse-flowering, compact-growing plants, very effective for bedding, edging, or ribboning; succeeds in common garden soil. Hardy annuals.	
417 Eucharidium Grandiflorum. Deep rose-shaded pink. 1 foot	
418 — — Album. Pure white; beautiful	
419 — Roseum. Rose; very pretty	
ERACROSTIS. NAT. ORD., Gramineæ.	
Ornamental grasses; suitable for winter bouquets.	
420 Eragrostis Elegans (Love-grass). From south of Europe	
421 — Cylindrifolia. From China	
ERIANTHUS. NAT. ORD., Graminece.	
429 Erianthus Ravennae. This is a bold-looking, reed-like grass, from four to six feet	
high, with a fine foliage, resembling much in appearance the Pampas grass;	
rare. Half-hardy perennial; from south of Europe	
ELEUSINE. NAT. ORD., Graminea.	
Ornamental grasses; light and graceful.	
423 Eleusine Coracana. From East Indies	
424 — Indicum. From East Indies	
EUTOCA. NAT. ORD., Hydrophyllaceae.	
Showy, free-flowering plants, suitable for beds or mixed borders; succeeds in any light, rich soil. Hardy annuals.	

NO. PRICE 425 Eutoca Alba Stricta. White, striped with blue. 1 foot \$.10
426 — Multiflora. Lavender. 1 foot
white
428 — Wrangeliana. Lilac; pretty
EUCNIDE. NAT. ORD., Loasaceae.
A charming golden-blossomed plant; alike effective and showy in mixed borders or grown in pots for conservatory decoration. Succeeds in a light, rich soil. Half-hardy annual.
429 Eucnide Bartonoides. Primrose; from Mexico

574 — Splendid Collections. See page of assortments.	
ICE-PLANT. NAT. ORD., Ficoidiaceæ.	
A most singular, trailing plant, with thick fleshy leaves that have the appearance of being covered with crystals of ice; very ornamental for rock-work, or mixing with other plants in conservatory or flower-garden.	
575 Ice-Plant. From Greece. Half-hardy annual	.05
IMPATIENS. NAT. ORD., Balsaminaceæ.	
Handsome, showy border plants; succeeds in light, rich soil. Half-hardy annual.	
576 Impatiens Glanduligera. Yellow and crimson; from East Indies	.10
IBERIS. NAT. ORD., Cruciferæ.	
Profuse-blooming, pretty little plants, especially adapted for rookeries, old stumps, or rustic baskets. They come into flower amongst our earliest spring plants, and, for a long time, continue a dense mass of beauty; succeed in any garden soil. Hardy perennials.	
577 Iberis Candidissima. New, beautiful; pure white. Half foot	.05
578 - Semperflorens. Fine, white; from Sicily. Half foot	.05
579 — Umbellata. Very fine. Half foot	.05
580 — Carnea. Light-pink. Half foot	.05
581 — Tenoreana. Blush. Half foot	.05
IRIS. NAT. ORD., Iridacea.	
582 Iris Anglica. Fine mixed	.25
IPOMEA (CONVOLVULUS). NAT. ORD., Convolvulaceæ.	
A genus of beautiful climbing plants, which, for the adornment of the conservatory and greenhouse, or for warm sheltered situations out of doors, are pre-eminently beautiful, many of them combining marvelously brilliant colors with pure white margins, and varying in shade from the most intense violet-blue to the most delicate cerulean. All the varieties are splendid, and should be extensively cultivated. The perennial species are invaluable for greenhouse decoration. Tender annual.	
583 Ipomea, Bona Nox (Good-night). White; from West Indies. From 10 to 15 ft.	.10
584 — Coccinea (Star Ipomea.) Fine scarlet	.05
585 - Burridge's (Morning Glory). Fine variety, with large bright crimson flowers.	
15 feet	.05
586 — Dickson's. A splendid Morning Glory, with large blue flowers	.05
dered with pure white; exceedingly beautiful. 12 feet	.25
588 — Lilacina. Delicate lilac, beautifully bordered with white. 12 feet .	.25
589 — Atroviolacea. Violet, bordered with pure white; superb. 10 feet .	.25
590 - Limbata. Rosy-violet, elegantly blotched with white. 10 to 15 feet	.10
591 — Elegantissima. One of the finest of all the Ipomea; blue, with intense	
purple center in the form of a star, with pure white margin	.25
592 — Purpurea (Morning Glory). Mixed 593 — Nil. Light-blue; fine. 10 feet	.05
593 — Nil. Light-blue; fine. 10 feet	
which, in its maturity, is one of the most lovely objects imaginable. 10 to 15	
feet	.25
595 — Learii. Magnificent mazarine-blue, shading to red. Greenhouse perennial.	
10 to 12 feet	.25
596 — Tuberosa. Pale yellow; from West Indies. Greenhouse perennial	.25
597 — Wildenovii. Purple; from East Indies	.25
warmen (bee cypress-rine)	.00
IPOMOPSIS. NAT. ORD., Polemoniacea.	

Remarkably handsome free-flowering plants, with long spikes of dazzling orange and scarlet flowers; very effective for conservatory and out-door decoration; succeeds in light rich soil. Half-hardy biennial.

CANNA.

NO. PRICE
807 Nasturtium, Tom Thumb, Scarlet. A beautiful variety, dwarf and compact;
quite as rich in color and as effective as the Tom Thumb Geraniums; fine for
pots or vases. 1 foot
808 — — Yellow. A variety similar to the last mentioned, with yellow flowers.
1 foot
809 — Brauty. Yellow, blotched with crimson; fine. 11 feet
810 — — Crystal-palace Gem. A new sulphur-color, spotted with maroon;
a splendid bedding variety. 1 foot
811 — — Pearl. Creamy white; a fine variety
812 - New Hybrid. Saved from the finest named varieties, producing
flowers of various shades - buff, yellow, crimson, maroon - in great profusion;
beautifully blotched and marbled
NEMESIA. NAT. ORD., Scrophulariaceæ.
Exceedingly pretty and profuse-blooming plants. Nemesia Compacta and Alba
should be grown in every garden. Half-hardy annual.
813 Nemesia Floribunda. White and yellow; sweet-scented
814 — Versicolor Compacta. Blue and white. 3 feet
815 — — Alba. Pure white. Three-quarters foot
816 — — Insignis. New; light-blue. Three-quarters foot
817 — La Superbe. Light-rose; fine. Three-quarters foot
NERIUM (OLEANDER). NAT. ORD., Apocynacea.
A class of splendid double-flowering evergreen shrubs, of a highly ornamental char-
acter; fine for conservatory decoration, or placing on lawns and terraces during the summer; growing in any light, rich soil. Half-hardy shrubs.
818 Nerium Oleander. Rosy-pink; double; from Italy. 6 feet
819 - Variegata. Scarlet and white; from Italy. 6 feet
NICOTIANA (TOBACCO-PLANT). NAT. ORD., Solanacea.
These are strong-growing, fine-foliaged plants. They are very effective for large shrubbery borders, and the leaves of some varieties are valuable for fumigating pur- poses. Tender annuals.
820 Nicotiana Glauca. Yellow; native of America
821 — Glutinosa. Scarlet; from Peru. 3 feet
822 — Vincæflora. White; very pretty; from South America. 2 feet
NICELLA (LOVE-IN-A-MIST). NAT. ORD., Ranunculacea.
A genus of very interesting, compact-growing, free-flowering plants, with curious- looking flowers and seed-pods. From the extraordinary motion manifested by the stamens, this genus has received the above singular names. Grows freely in any gar- den soil. From Spain. Hardy annual.
823 Nigella Damascena. Blue; fine
824 - Nana. A dwarf variety; flowers blue and white; double
825 — Hispanica, Blue; very showy
826 — — Alba. Pure white
NEMOPHILA. NAT. ORD., Hydrophyllaceæ.
This is, perhaps, the most charming and generally useful genus of dwarf-growing hardy annuals. All the varieties have a neat, compact and uniform habit of growth, with shades and colors the most strikingly beautiful; so that, ribboned, sown in circles, or arranged in any style which the fancy may suggest, the effect is pleasing and very striking. They are also very useful for pot-culture. Hardy annual.
827 Nemophila Atomaria. White, with blue spots. 1 foot
828 — — Oculata. Light-blue, blotched with black; fine. 1 foot
829 — Discoidalis. Black, with white edge

863 — Undulata. Primrose; from Peru. Hardy perennial. 14 feet	
open in sunshine (diurnal). 2 feet	
865 - Glauca. Flowers deep rich yellow; very free-flowering. Hardy perennial .	.10
ONOPORDON. NAT. ORD., Compositæ.	
866 Onopordon Tauricum. A noble thistle-like plant, of very ornamental charac-	
ter; thrives well in any soil; flower purple. Hardy perennial. 6 feet	
OXALIS, NAT. ORD., Oxalidacea.	
Elegant flowering-plants, particularly adapted for the greenhouse or parlor, where they bloom in mid-winter.	
867 Oxalis Rosea. A very neat, erect-growing plant, six to nine or twelve inches high,	
with small, medium-sized leaves, and numerous conspicuous clusters of bright rose-colored, salver-shaped flowers	
	.10
	.10
OATS (AVENA SENSITIVA). NAT. ORD., Graminea.	
A very curious genus of ornamental grasses; fine for dried bouquets; suitable for mixed borders. Hardy annual,	
869 Oats Animated. Curious. 2 feet	.05
OXYURA, NAT. ORD., Compositæ.	
870 Oxyura Chrysanthemoides. A showy, free-flowering plant, with beautiful	
fringed flowers; golden yellow; from California	.05

PANSY (HEARTSEASE OR VIOLA TRICOLOR.) NAT. ORD., Violacea.

The Pansy, or Heartsease, is a general favorite and old acquaintance with every one who has any thing to do with a flower-garden. It begins to open its modest but lively flowers as soon as the snow clears off in the spring, and continues to enliven the garden till snow comes again. The flowers are in the greatest perfection in May and June; the burning sun of summer is unfavorable for their greatest beauty, but in autumn they are fine again. The Pansy is properly a biennial, but can be perpetuated by cuttings or division of the roots. Seeds sown in August, in the open borders, will come up readily in a few weeks. The seeds should be slightly covered with fine soil, if covered at all, as half the seeds sown rot in the ground from being covered too deep. As soon as they expand the second set of leaves, they should be planted out into beds; if planted in the spring, they should not be allowed to flower until late in the fall; the buds should be picked off during the summer, which will make the plants bushy and compact. They require to be covered during the winter with evergreen boughs or a cold frame. The following seeds were selected by some of the most celebrated European florists from prize collections, and we can recommend them as first-class in every respect.

PELARCONIUM. NAT. ORD., Geraniacea.

A genus of indispensable and beautiful greenhouse plants; whether for the adornment of the conservatory or the drawing-room, they stand unrivaled. Greenhouse perennial.

PENSTEMON. NAT. ORD., Scrophulariacea.

A genus of well-known and highly ornamental hardy herbaceous plants, with long, graceful spikes of fine-shaped and richly colored flowers. One of the most effective and free-flowering of border and bedding plants; succeeds in any light soil.

909 Penstemon Cordifolius. Fine; scarlet; from Mexico. 2 feet				.10
910 — Gentianoides. Purple and white; from Mexico. 2 feet				.10
911 - Coccineus. Scarlet and white; from Mexico				.10

916 — Finest Mixed				.10

PERILLA. NAT. ORD., Labiata.

Among the recent introductions of ornamental-foliaged plants for flower-garden decoration, the Perilla deserves a more than ordinary share of attention. Its habit of growth is neat and shrubby, whilst its foliage is a deep mulberry or blackish purple, and forms a fine contrast to the silvery foliage of Cineraria Maritima, or the lively green of other plants. Ilalf-hardy annual.

917 Perilla Nankinensis. Leaves, a deep mulberry or purplish black; from China.

PETUNIA. NAT. ORD., Solanacea.

A highly ornamental and profuse-flowering, easily cultivated garden favorite, equally effective and beautiful whether grown in pots for the decoration of the greenhouse and sitting-room window, or planted out in beds or mixed borders. The brilliancy and variety of its colors, combined with the duration of its blooming period, render it invaluable. Seeds sown in spring make fine bedding-plants for summer and autumn display; succeeds in any rich soil. Half-hardy perennials.

STOCKS (GERMAN, FRENCH, AND ENGLISH). NAT. ORD., Cruciferæ.

The Stock Gillyflower is one of the most popular, beautiful, and important of our garden favorites; and whether for bedding, massing, edging or ribboning, it is unsurpassed either for brilliancy and diversity of color, or profusion and duration of bloom

either for brilliancy and diversity of color, or profusion and duration of bloom.

The Ten-week Stock is the most universally cultivated, and usually blooms ten to twelve weeks after being sown. They grow from six to fifteen inches high, and when cultivated in rich soil, and occasionally watered with weak guano water, throw out an immense quantity of lateral spikes of bloom, so that each plant forms a perfect bouquet; and it would, indeed, be difficult to surpass the grand effect produced in beds or ribbons by these exquisite gems.

1104 — New Hybrid. Mixed between the rough and smooth-leaved varieties;
very fine
1105 - Dwarf German (saved from pot-plants). This is one of the finest.
Fifteen colors mixed
1106 - Miniature. A dwarf variety, growing four inches high; fine for edg-
ings; finest mixed
1107 — Semperflorens, or Perpetual. A fine variety, remaining in flower a
long time; finest mixed
1108 — Giant, or Tree. A very valuable acquisition, by its large flowers being
from one and a half to two inches in diameter; height of plants, two to two and
a half feet; unsurpassed for bedding purposes; finest mixed
The Intermediate or autumn-flowering varieties, if sown early in spring, will bloom the same autumn. For winter-flowering, they should be sown in June. They are also valuable for early spring-blooming, for which purpose they should be sown the last of July or in August, and kept from hard frost during winter. Plants treated in this way, and planted out in beds in May, make a rich display during the early summer months. The Emperor, or perpetual-flowering. This magnificent class of Stocks may be treated in the same manner as the Intermediate, and used for the same purposes. They frequently last several years, if protected from frost; hence its name—Perpetual.
1109 Intermediate, or Autumn-flowering Stock. Finest (twelve distinct colors)
mixed
1110 Perpetual, or Emperor Stocks. Finest mixed
1111 — New Large-flowering. Finest mixed; superb
1112 Hybrid Giant Cape, or Cocardean Stocks. Finest (five distinct colors)
mixed
The Brompton and Giant Cape are generally called Winter Stocks, on account of their not flowering the first year. The former is robust and branching. The latter possesses the characteristics so much esteemed by some; viz., immense pyramidal spikes of bloom.
1113 Brompton, or Winter Stocks. Finest mixed

Handsome border annual, of easy culture; native of Persia; with fragrant flowers from July to September.
1123 Sultan Sweet. White. 2 feet
1124 — Purpurea. 2 feet
SUNFLOWER. NAT. ORD., Composite.

(See Helianthus.)

PRICE

	SWEET WILLIAMS. NAT. ORD., Caryophyllacea.	
I 8	A useful and well-known tribe of plants, perfectly hardy, and easily raised from seed; a bed of fine varieties presenting a rich sight; it sports into endless varieties, viz.; inik, purple, crimson, scarlet, white, variously edged, eyed, and spotted. Our seeds were saved from the finest named varieties, together with Hunt's (a celebrated English umateur,) which we can confidently recommend as superior to any thing ever before offered in this country. Hardy perennials.	
	6 Sweet Williams. Fine mixed	ò
112	7 — Double-flowering. Finest mixed; from a splendid collection of	
	double flowers)
112	8 — Auricula-flowered. New. This is one of the most desirable, differing from other varieties only in the markings of the flowers, which closely resemble the Auricula. The flowers have a large white disc, with a broad middle zone of	
	rich crimson, purple, and violet; trusses large and perfect	5
110	9 — Hunt's Perfection. Saved from Bragg's finest strain in cultivation;	
LIN	has taken the first prize at all the London exhibitions the past season; truly	
	gorgeous in size, color, and variety	5
	gorgeous in size, color, and variety	-
	SWEET ALYSSUM. NAT. ORD., Cruciferæ. (See Alyssum.)	
	TAGETES. NAT. ORD., Compositæ.	
	Elegant free-flowering plants, with pretty foliage; very effective in mixed borders;	
8	ucceeds best in a light rich soil. Half-hardy annuals.	
	O Tagetes Signata Pumila. An elegant new dwarf variety, about one foot high;	
	and, when full grown, the plant will measure two feet in diameter, forming a	
	beautiful compact bush, completely covered with flowers, and continuing in	
	bloom until hard frost sets in. Recommended as one of the most showy plants	
	for borders and dwarf beds yet introduced; of the easiest culture. Plants	
	should stand at least two and a half feet apart)
113	1 - Lucida. Deep yellow; from South America. 1 foot)
	2 - Signata. Orange, streaked with brown; from Peru. 2 feet)
	TACSONIA. NAT. ORD., Passiftorea.	
113	3 Tacsonia Ignea. This is a splendid orange-scarlet-colored "Passion-flower,"	
2100	like conservatory climbing shrub; showing the unequaled vermilion tint of the	
	Genesera Cinnabarinna, each blossom being relieved by contrast with a circle	
	or band of purple filaments in the centre	
	of band of purple maments in the centre	,
	TOURNEFORTIA. NAT. ORD., Boraginea.	
9	A very pretty plant, flowers of which resemble the Heliotrope, but without its fra- rance; fine either for pot or garden culture. Half-hardy annual.	
	1 Tournefortia Heliotropoides. Lilac; trailer; from Buenos Ayres. Half foot .10)
	TRIFOLIUM. NAT. ORD., Leguminosæ.	
	Remarkably showy plant, with large handsome flowers; grows freely in any soil.	
	Iardy annual.	
	5 Trifolium Atropurpureum. Dark purple. 1 foot	
	TRACHELIUM (THROATWORT.) NAT. ORD., Campanulaceae,	
446		
1137	7 Trachelium Caruleum. Blue; pretty Campanula-like plants; from Italy.	
	Hardy biennials. 2 feet	1
	TRITOMA. NAT. ORD., Hemerocallidacew.	
	Splendid half-hardy evergreen, herbaceous plants forming large robust stanless	

Splendid half-hardy, evergreen, herbaceous plants, forming large, robust, stemless leaf crowns, from the centre of which their tall flower-stems, three to five feet in height, are produced in summer and autumn, with large dense-flowered terminal racemes of rich pendant orange-red and scarlet tubulous flowers, each raceme a foot or more in length.

They are admirably adapted for bedding out; and the numerous terminal flamecolored blossoms form a stately distant or mediate effect. They thrive in any rich light garden soil. On approach of winter, they should be taken up and placed in the greenhouse or cellar, for replanting out again in spring.

	PRICE
1138 Tritoma Uvaria. Finest mixed	\$ 0.25
THUNBERCIA. NAT. ORD., Acanthacea.	
Extremely ornamental climbers; much admired; very free bloomers; good for trelli- stems of trees, in the greenhouse, or out of doors in summer in a warm situation Tender annuals.	3, 1.
1139 Thunbergia Alata. Winged, buff, with dark eye. 4 to 6 feet	05
1140 - Alba. White with dark eye. 4 to 6 feet	05
1141 - Aurantiaca, Bright orange; dark eye. 4 to 6 feet	05

1143 — Sulphurea, Pale yellow, 4 to 6 feet	05
1144 — Americana. Clear buff. 4 to 6 feet	10
1145 — Mixed. All the above mixed	10
TICRIDIA. NAT. ORD., Tridacea.	
1146 Tigridia Pavonia (Tiger Flower.) Red and yellow, spotted with dark crimsor	n -
	25
purple. Tender bulbs 1147 Conchiftora. Bright yellow, spotted with crimson	25
TROPÆOLUM. NAT. ORD., Tropwolew.	
(See Canary Flower.)	
The following varieties, as hybrids from Tropæolum Lobbianum, are unsurpassed be any collection ever offered. The are all of the easiest culture, and flower profusely the first year. Though not in all cases perpetuating their respective kinds true froseed, they nevertheless often produce still more beautiful ones, and among the varieties of the perpetual-flowering, which are invaluable for decoration in the green	y ne m m
house or conservatory, and for bouquets in winter. In the greenhouse or conservatory they may be had in bloom the greater part of the year; and in favored situations in the open air, for edgings, covering trellis-work, chandles of rustic baskets, or trailing from vases, their elegance of form and brillianc of color render them peculiarly valuable.	ie or :y
1143 Tropwolum Lobbianum. Orange. 4 feet	20
1149 — Caroline Schmidt. Deep scarlet. 6 feet	25
1150 - Duc de Malakoff. Straw color; edged rose, spotted with red. 6 fee	et .25
1151 — — Brilliant. Dark scarlet. 6 feet	25
1152 — Schultzi. Deep carmine; foliage dark green; fine. 4 feet	10
1153 — Flamula Grandiflora. Yellow; beautifully streaked with carmine	
	20
very choice. 6 feet 11.54 — Giant des Batailles. Brilliant crimson. 6 feet	25
1155 — Garibaldii. Fine orange, shaded with scarlet. 6 feet	25
	, .25
1156 — Duc de Vicence. Sulphur, with vermilion spots. 6 feet	20
VALERIAN. NAT. ORD., Valeriance@.	
Perennial plants; mostly natives of Europe; will grow in almost any soil. The dware species are very suitable for rock-work.	
1157 Valeriana Rubra. Red. 11 feet	05
1158 — Alba. White, 1½ feet	05
VALLOTA. NAT. ORD., Amaryllidacea.	
A splendid bulbous-rooted plant, allied to the Amaryllis and Lily. It blooms i	n
August, throwing up its strong stems about one foot high, with from five to eight bri lant scarlet lily-like flowers; very ornamental for bedding out in summer, or for cultur in pots.	II.
1159 Vallota Purpurea Superba. Fine	25
VENIDIUM. NAT. ORD., Compositæ.	
An exceedingly showy plant, with large handsome flower, having a very gay appearance in beds or mixed borders; thrives best in turfy loam. Half-hardy annual.	r-
1160 Venidium Calendulaceum. Deep orange; rich brown centre; from Cape	of
Good Hope. 1 foot	05
VENUS' LOOKING-GLASS. NAT. ORD., Campanulacea	
A free-flowering, pretty little plant, of nice habit of growth, especially adapted for beds, ribbons, or edgings; grows well in any garden soil. Hardy annual.	or

POUBLE ZINNIA.

See page 66.

NO.	IUE
1161 Venus' Looking-Glass (Campanula). Finest mixed; from South of Europe.	0.05
VENUS' NAVELWORT. Nat. Ord., Boraginacea.	
A very pretty little plant, useful for ribbons, and forms a neat edging to shrubbery	
borders, etc.; grows freely in every soil. Hardy annual.	
1162 Venus' Navelwort (Cynoglossum Linifolius). White; from Portugal. 14 feet	.05
VERONICA. NAT. ORD., Scrophulariacew.	
A genus of the most beautiful and showy evergreen shrubs, producing their handsome	
spikes of flowers in the greatest profusion. 1163 Veronica Glauca (New). Blue; very fine; from England. Hardy perennial.	
2 feet	.10
1164 — Devoniana. Red and white. Half-hardy shrub. 21 feet	.10
1165 - Syriaca. Bright blue and white; fine for pot-culture, edgings, vases, or rock-	
work. Half-hardy annual. Half foot	.10
1166 — — Alba. White variety of preceding	.10
1168 — Austriaca. Blue. Hardy perennial	.05
1169 — Imperialis. Blue. Greenhouse shrub	.25

	borne gracefully on large terminal pyramids	1.00
1312	Dianthus Heddewigii Nanus Flore Albo Pleno (Benary.) This is a new	
	double white variety of the beautiful Heddewigii pink. It is of quite compact	
	dwarfish habit, resembling Dianthus Heddewigii Fl. Pl., and nearly, without	
	exception, constant from seed, which it produces very sparingly	.50
1313	- Cincinnatus. A new species from Japan, of the size of Dianthus Hedde-	
	wigii, and with deeply fringed petals. Superb	.50
1314	- Chinensis Coronatus Flore Pleno. A new double-flowered variety of	
	this beautiful striped variety, raised in Prussia, and received direct from the	
	producer. Very superb	.25
1315	- Dictamnus Fraxinella Grandiflora. A new large-flowered variety, in	
	various shades and most brilliant colors. Very fine	.50
1316	Godetia Lindleyana, Tom Thumb. A new dwarf, compact free-flowering	
	variety	.10
1317	Gynerium Argentium Kermesinum. A new and superb variety of the	
	magnificent Pampas Grass, the tall silvery flower-spikes tinted with rosy-	
	crimson	.50
	Heliotropium Mexicanum. Quite new, with light rose-colored flowers	.50
13 19	Heracleum Emineus. A new and distinct species, now first offered; as an	
	ornamental foliaged plant, surpassing all others	
1320	Hibiscus Cannabinus. A biennial species, growing five feet high, with finely	
	cut foliage, and an elegant addition to the flower-border; flowering the first	
	year from seed; with white, with purple throat	.50
1321	- Macrophyllus. A gigantic shrubby species, with large cordate glossy	
	leaves, and light-yellow, fragrant flowers; elegant for planting out in summer.	
	Five seeds	1.00
1322	Ipomea Coptica. A tiny, pretty climber, with finely cut foliage and star-like	
	rose-white flowers, opening in small clusters	1.00
	- Cordigera. An annual, with star-like rosy-carmine flowers	.10
	- Schizoloma. Annual, with brilliant carmine flowers	.25
	Iris Pumila. Very beautiful; saved from forty new varieties	.50
	Linum Perenne Rosea. Color, clear lilac-rose	.10
1327	Lathyrus Mauritanicus. A new and pretty perennial and climbing species,	0~
	with crimson flowers	.25

NO.	PR	RICE
1328	Lobelia Erinus Princess Alexandria. Of the same habit as Lobelia Pax-	
		0.25
	Lupinus Tricolor Mutabilis. Cream color, changing to mottled purple .	.10
1330	Lychnis Grandiflora Gigantea. New, with flowers of double the size of the	
	beautiful Lychnis Haageana, in all the colors of white, chamois, rose, scarlet, etc.	.50
1331	Melothria Regelii. A climbing plant of the Gourd tribe, with small white	
	flowers, and small oval fruit	.50
1332	Mimulus Pardinus (Tigrinus) Flore Pleno, Superb Double. A new	
	strain, obtained by the florists of Prussia, having all the variety of colors of	
	the single, and come so true from seed that there is but a small percentage of	
	single flowers. These are quite equal to any of the English varieties, and are	
	now for the first time offered as the most beautiful yet produced	.50
1333	Machæranthera Glabra. A neat hardy perennial, diffusely branched, and	
	covered with Aster-like, violet flowers, with a yellow centre more than an inch	
	in diameter, and standing out in corymbs. Sown early, it flowers the first	
	year. One and a half to two feet high	.25
1334	Nicotiana Grandiflora Purpurea. A remarkable new variety of species,	. 20
1001	with very large leaves and flowers, the latter of which are of a purplish red	
	color. As an ornamental foliaged plant, it holds a high rank. Grows five or	
		.10
400 %	six feet high	.10
1000	Onothera Drummondii, Nana Alba. Similar in habit and flower to the Œ.	ox
1990		.25
	Paparea Spicatum. Perennial, with fine foliage, and large light-red flowers .	.50
1337	Phlox Drummondii Isabellina. A very fine new variety, producing con-	0=
4000	stant pale-yellow flowers, entirely new and distinct in color	.25
1838	Pectis Angustifolia. A new dwarf annual, of a dense-leafed habit, forming	
	bushes a foot across, with opposite linear foliage; remarkable for its strong	
	citron-like fragrance. The flowers are nearly half an inch in diameter, of a	
	bright yellow, so abundant as to completely cover the surface of the plant.	
	This fine acquisition received a certificate from the Floral Committee of the	
	Royal Horticultural Society of London	.25
1339	Petunia Multiflora. A small-flowered variety; red, with dark centre; flower-	
	ing most abundantly. Constant from seed, and fine for bedding	.25
1340	Phlomis Abasicus. A new and fine hardy herbaceous species, with golden-	
	yellow flowers in spikes, much resembling the Salvia, in form	.25
1341	Pink, Sarah Howard. A new white monthly Pink, with slender foliage and	
	stems; two feet high; loaded with flowers the whole autumn. The flowers are	
	medium size, double, pure white, and very beautiful	1.00
1342	Portulaca Grandiflora. A magnificent collection, saved by one of the best	
	German growers; all from the most beautiful double flowers; in six distinct	
	colors,-alba, alba striata, aurantiaca, splendens, Thellusoni, Thorburni.	
	Each separate	.25
1343	- Mixed. The six varieties mixed	.50
1344	Rhynchocarpa Welwitschi. One of the Gourd family; very ornamental,	
	with thick five-lobed foliage, and acorn-like scarlet fruit. Ten seeds	1.00
1345	Salvia Sibthorpi. Hardy perennial, with fine large leaves, and long spikes of	
	lilac-blue flowers. Very ornamental	.50
1346	- Splendens Compacta. A new, dwarf, compact growing variety, of the old	
	beautiful species	.50
1347	- Graciliflora. A new species, with long flowers of a rosy-lilac color. Very	
	delicate	.25
1348	Schizanthus Retusus Nanus. A valuable dwarf, compact variety, flowering	. 20
2010		.25
1310	more abundantly and brighter red than the old species	
1010		
1350	scarlet. Received certificate of the Royal Horticultural Society of London .	.20
1000	Silene Pendula Ruberrima. A very distinct variety, with brownish-green col-	OF
10 = 1	ored foliage, and bright carmine rose-colored flowers. Very beautiful	
1331	Solanum Fontanesianum. An annual species, with large canary-yellow flowers,	
	deeply cut foliage, and spinous fruits of the size of a walnut	.50

		CE
	Solanum Reclinatum. Similar to Lasciniatum, with large azure-blue flowers \$0	.50
1303	Spartocytisus Nubigerus. A beautiful and rare species, with fragrant white	~ 0

1354	Statice Thouini. A charming herbaceous plant, with light-azure calyx, and	
40.00		.50
1355	Trachelium Caruleum Carmine. A beautiful pink variety of this old but	
	greatly admired plant; of a dwarfer and more compact growth	.25
1356	Tropwolum, King Theodore. A new variety, selected from King of Tom Thumb,	
	having the same bluish-green foliage, and novel blossoms of an intense black;	
	forms a fine contrast with the scarlet	.25
1357	Waitzia Acuminata Citrina. A fine Australian Everlasting, of bushy, com-	
	pact growth, twelve inches high, with narrow foliage, bearing numerous terminal	
	corymbs of flowers, each flower an inch across, and in all the various shades of	
	yellow	.25
1358	- Albo Purpurea. A variety of the former, with amaranth-colored	
	flowers, in the various shades from crimson to purplish-red, with a yellow disk.	
	Both are suited to pot-culture, and, if planted in the open ground, require a	
	light sandy soil	.50
<i>1359</i>	- Corymbosa Sulphurea. A beautiful yellow variety, of the amaranth-col-	
	ored species, but much more showy	.25
<i>1360</i>	- Grandiflora. Resembling the W. Aurea, but more robust in habit, and with	
	larger flowers. A very fine Everlasting, which received a first-class certificate	
	from the Royal Horticultural Society of London	.50
<i>1361</i>	Xeranthemum Annuum. Double white. A new variety of a silver-white, and	
	as double as the purple	.25
	· ·	
1362	Antirrhinum Majus Tom Thumb. A very handsome dwarf Antirrhinum or	
	Snapdragon, of compact globular growth, with bright vermilion-colored flowers	.10
1363	Aquilegia Hybrida Lucida. A beautiful hybrid; remarkably free-flowering,	
	with handsome foliage; flowers large, brilliant bronze scarlet, yellow-margined.	
	with nandsome ionage; nowers large, brilliant brouze scarlet, yellow-margined.

densely branched plant, two feet high, above which rise on slender stalks	
multitudes of pretty white flowers, which are produced early and freely the	
first year from seed	.25
1380 Mimulus Quinquevulnerus Robustus. A beautiful novelty of very vigorous	
growth, about a foot high, with large leaves of a brilliant green, blotched with	
black. The large, handsome flowers are curiously mottled and marked in all	
the rich coloring peculiar to this tribe of plants	.25
1381 — Cupreus Hybridus. Of the great variety of Minulus, none can surpass	
this for richness and diversity of color and free blooming. The plants are	
dwarf, bushy, and vigorous, with large, fine-shaped flowers, spotted, stained,	
marbled, speckled, and blotched in the most striking manner	.25
1382 Petunia Hybrida Coronata. A most magnificent dwarf compact variety,	
with beautiful, regularly formed flowers of great substance, of a brilliant vel-	
	.10
1383 Reseda Crystallina. A very interesting species, similar in habit to Reseda	
Odorata (Mignonette,) but with larger capsules, or seed-pods, which are	
covered with transparent granulations or crystals, in the manner of the Ice	
Plant	10
1384 Tropæolum, King of Tom Thumb. Magnificent. The lustrous, blue-green	.10
foliage, contrasting vividly with the intense scarlet of the blossoms, produces	
an unequaled blaze of brilliance, and the plant must become a universal favorite	95
1385 Waitzia Corymbosa. Another very fine annual species of Everlasting, of	. 20
bushy, compact habit, growing about one foot high, and as much in diameter,	
each branch terminating in clusters of elegant flowers of a deep amaranth	
color, with small yellow disk; succeeds well in light soil in the open ground,	
, , , , , , , , , , , , , , , , , , , ,	0=
blooming from August to October. Also fine for pot culture	.20

WESTERN CULTIVATOR'S GUIDE

TO THE VEGETABLE GARDEN.

VEGETABLE SEEDS.

Artichoke (CYNARA SCOLYMUS.)

German, Artischoke. - French, Artichaut. - Spanish, Alcachofa.

CULTURE .- The Artichoke may be grown from seed or offset suckers, separated early in spring. The best way to obtain a supply from seed is to sow the seeds in April, in a bed of good rich earth, or it may be planted in drills one inch deep and about twelve inches apart. It should be transplanted the following spring to a permanent place. Either in beds or drills, plants should stand two feet apart each way, requiring a deep, rich, moist loam; also should be protected with leaves or straw during winter.

Green, or Common. Heads large, of a conical or oval form; scales deep green, thick, and fleshy; pointed at the tips, and turned outwards. Per pkt., 10 . per lb. Jerusalem. Produces tubers resembling potato. Cultivated by planting tubers as early as the ground will admit

Asparagus (Asparagus Officinalis.)

German, Spargel .- French, Asperge. - Spanish, Esparrago.

This universal vegetable is supposed to be a native of Great Britain, where it is found on the banks of sandy soil contiguous to the sea, growing luxuriantly under the salt breezes. There are, it is said, several varieties of Asparagus; but the difference mainly arises from the nature

CLITURE.—Sow the seed early in spring one inch deep, and three or four inches apart, in rows one for apart. When two years old, they may be transplanted into permanent bods, the plants placed a fost apart in each direction, and at least four inches beneath the surface.

To make it "Giant," be particular to select for the bed warm rich soil. Trench it at least eighteen inches deep, working in six inches or more depth of well-rotted manure, the surface when bed with manure, and in spring dig it in lightly, care being taken not to disturb the roots.

Fine Asparagus beds may be formed by sowing the seed where it is to remain. With this end in view, sow the seed in beds prepared as directed above. Sow the seed in rows lengthwise, twelve inches apart. When a year old, thin out the plants to one foot apart.

Giant Purple Top. Sprout white; top, as it breaks ground, purple; grows to a good Green Top. When grown under same treatment as Giant Purple Top, it is generally smaller or more slender. Per pkt., 5 .

English Bean (FABA VULGARIS).

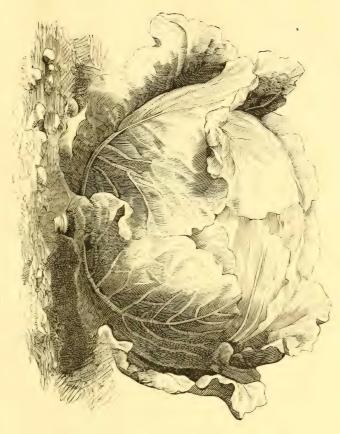

German, Gartenbohne. - French, Feve de Marais. - Spanish, Haba.

The following varieties are much grown in England, but find little favor in this country.

CULTURE .- Sow as early as the ground will admit, in rows two feet apart, and three inches apart in the rows. They will come sooner into bearing if the tops of the plants are pinched off as soon as they are in full bloom. Succeed best in a deep, strong, loamy soil.

Early Mazagan. This variety, though originally from Mazagan, on the coast of Africa, is one of the hardiest sort now in cultivation. Stems from two to three feet high; rather slender .

Tong Podded This veriety grows from those to four fact high a posterior pe	er qt.
Long Podded. This variety grows from three to four feet high; remarkably productive, and a few days later than the Mazagan	25
Broad Windsor. This familiar sort is much esteemed and extensively cultivated,	00
remaining fit for use longer than any other variety. A sure bearer	40
Beans, Dwarf or Bush (Phaseolus Vulgaris.)	
German, Bohne French, Haricot Spanish, Frijolenano.	
The plants of this class vary from a foot to two feet in height. They require no stake or for their support.	-
Culture.—Drop the beans two or three inches apart, in rows two and a half feet applant in light rich soil; hoe often, never when the vines are wet, or they will rust, varieties of beans are very sensitive to frost and cold, and should not be planted beformiddle of spring. As they require but about six weeks to make green pods, they can a sown as late as July.	
Early Yellow Six Weeks. Excellent for string or shell; one of the earliest .	er qt. 40
- Turtle Soup. Much esteemed, when dry, for cooking	30
- Valentine. Long tender pod; an excellent string-bean	40
- Mohawk. Early, productive, and very hardy	40
- China. Red eye; one of the most productive	40
	30
Red Bush Cranberry. One of the best string-beans	40
Refugee, or Thousand to One. A favorite string with many; very productive .	40
White Kidney, or Royal Dwarf. Late and productive	30
Dwarf Horticultural, or Zebra. Excellent, green or dry	40
Poons Polo or Burning (Priggorie Villages)	
Beans, Pole, or Running (PHASEOLUS VULGARIS.)	
German, Stanger Bohne.— French, Haricotes a rames.— Spanish, Judius.	
As a class, these are less hardy than the dwarfs, and are not usually planted so early is eason. The common practice is to plant in hills three feet or three and a half apart, we stake or pole to run upon.	ith a
London Horticultural, or Speckled Cranberry. Sometimes called Wren's Egg;	er qt.
an excellent variety; may be used as a snap, or, when more advanced, shelled,	
as the Lima; very productive	40
Red Cranberry. This is one of the oldest and most familiar of garden beans; excel-	40
lent as a string or snap bean	40
White Case Knife is the most prolific of the running varieties. As a shelled bean, it	10
is of excellent quality in its green state, and, when ripe, farinaceous and well-	
flavored in whatever form prepared	40
Indian Chief, or Wax. One of the best varieties for general cultivation, either for	
 snaps or shelled; remarkable for its fine, tender, succulent, and richly-colored pods, which are produced in great abundance, continuing a long time fit for use 	75
Beans, Flowering-Runners (Phaseolus Multiflorus.)	
German, Grosse Bunte Bohne French, Haricot d' Espagne Spanish,	
Judia Vastago d'Espa.	
Scarlet-Runner. A very prolific variety; fine for covering arbors, trained over pales,	er qt.
up the walls of cottages, which they enliven by the brightness of their blossoms,	
	50
White-Runners. A variety of the Scarlet-Runner. The plants are less vigorous, and	
the flower and seeds pure white. As a shell-bean, either green or ripe, they are considered superior to the scarlet, and often seen in our markets under the	
name of Lima, from which they may be distinguished by their great thickness,	
and more rounded form	50
Painted Lady. A sub-variety of the Scarlet-Runner, with variegated flowers; the upper	
petals being scarlet, the lower white	60

FARLY SCHWEINFURTH CABBAGE.

See page 79

Beans, Lima (PHASEOLUS LUNATUS.)	
German, Bohne von Lima French, Haricot de Lima Spanish, Haba Vastago de Lima.	
Large Lima. This is one of the latest, as well as the most tender, of all garden beans. Little will be gained by very early planning, as the seeds are not only liable to decay before vegetating, but the plants suffer greatly from cold, damp weather; the best time being from the first to the middle of May. In planning, be sure to place the eye downwards, or otherwise it might not come up	
Beet (BETA VULGARIS.)	
German, Runkle Rube French, Betterave Spanish, Bettaraga.	
CULTURE.—Beets are always raised from seeds. For early use, sowings are sometimes made in November; but the general practice is to sow the seed in April, as soon as the frost is out of the ground, or as soon as the soil can be worked. For use in autumn, the seed should be sown about the middle or twentieth of May; and for the winter supply, from the first to the middle of June. Lay out the ground in beds five or six feet in width, and of a length proportionate to the supply required; spade or fork the soil deeply and thoroughly over; rake the surface smooth and even; and draw the drills across the beds fourteen inches apart, and about an inch and a half in depth. Sow the seeds thickly enough to secure a plant for every two or three inches, and cover to the depth of the drills. Should the weather be warm and wet, the young plants will appear in eight or ten days. When they are two inches in height, they should be thinned to five or six inches apart. The surplus plants will be found an excellent substitute for Spinach, if cooked and served in a like manner. The after-culture consists simply in keeping the plants free from weeds, and the earth in the spaces between the rows loose and open by frequent hoeing.	
Early Flat Bassano. An Italian variety; generally considered the earliest of	
garden beets, being from seven to ten days earlier than the Early Turnip Blood.	
Flesh white, circled or zoned with bright pink; very tender and juicy; not	
suited for winter use unless sown quite late. Per pkt., 5	
sometimes circled and rayed with paler red; remarkably sweet and tender.	
Per pkt., 5	
- Yellow Turnip, or Orange. A sub-variety of the Blood Turnip, differing princi-	
pally in color, and to some extent in form, which is less compress. Flesh yel-	
low, comparatively close grained, sweet and tender. Per pkt., 5	
sown before the middle of June, as the roots, when large, are frequently tough	
and fibrous. Per pkt., 5	
- Smooth Dark Blood. This is an improved variety of the common Long Blood.	
Flesh dark blood-red, sweet, tender, and fine grained, with but few side roots;	
fine winter beet if sown late. Per pkt., 5	
young roots are tender, sweet, and well flavored. Per pkt., 5	
Long Red Mangel Wurzel. A large variety, grown principally for feeding stock.	
When young, is sometimes used for the table. Flesh white, zoned and clouded	
with different shades of rade is harder and become well. Bounds # 40	

Borecole, or Kale (Brassica Oleracea Acephala.)

German, Blatter Kohl .- French, Chouvert .- Spanish, Breton.

Borecole, German Greens, or Scotch Kale, is a very delicate vegetable. It is essential to its

perfection that it be acted upon by the frost before it is cut for the kitchen. The parts used are the tops or crown of the plant, with any of the side sprouts. It boils well, and is tender and sweet.

Culture.—The seeds are sown at the time of sowing the seeds of the Cabbage or Cauliflower, and in the same manner; early plants may be started in a hotbed, or the seed may be sown in the open ground in May. In transplanting, treat the plants same as young cabbages, setting them more or less remote, according to the size or habit of the variety; requires a light rich soil.

Dwarf Carled Kale, or German Greens. This is a very hardy and comparatively low-growing variety; the leaves are finely curled. A fine variety for winter and spring use when planted in a light cellar, or other protection from the severity of the weather. In the Southern and Middle States it stands well in the open beds. Per pkt., 5

Tall Green Carled. A fine hardy and productive variety; height two and a half feet.

Per pkt., 5

Brussels Sprouts (Brassica Oleracea Var.)

German, Kopf, Kohl, Gruner .- French, Chou de Bruxelles.

Cultivated for the small heads, which are produced in great numbers on the main stem of the plant, and are in perfection in the autumn. They are very tender, and of fine flavor after early frosts. Sow in seed-beds in May; transplant and cultivate as directed for Cabbage.

flavor, after cooking, is all that could be desired,—mild, mellow, and very fine. Per pkt., 25.

Broccoli (Brassica Oleracea Botrytis.)

German, Brocoli, Spargel-kohl. - French, Chou Brocoli. - Spanish, Broculi.

In its structure and general habit, the Broccoli resembles the Cauliflower. It is very hardy, and surer to head, but inferior in flavor.

CULTURE.—The seeds should be sown in hotbeds in April, or in open ground in May, in a very deep rich soil, on an open exposure, where the plants grow much stronger than near trees or fences. Sow the seeds tolerably thick on the surface. If dry, tramp them down, and rake in lightly. If drought continues, give the beds a few waterings till the plants appear, which will be in two or three weeks. Transplant in June or July, when the weather is moist, in rows two feet apart, and twenty inches in the row. Their further culture is to keep them clear of weeds by hoeing and stirring the ground. When they have advanced in growth, draw some earth to their stems, which greatly promotes their luxuriance.

Walcheren. Comparatively new, and so closely resembling a Cauliflower as to be scarcely distinguishable from it. The leaves, however, are more curbed, and it is hardier. Per pkt., 25

Carter's Champion. Dwarf, compact-growing, large-headed; the best variety in cultivation. Per pkt., 25.

Cabbage (BRASSICA OLBRACEA CAPITATA).

German, Kopfkohl. - French, Chou Pomme. - Spanish, Repollo.

One of the most popular vegetables grown.

CULTURE. — The Cabbage can be cultivated by the most simple and easy means. It grows in most soils, and produces its beneficial heads nine months in the year. The ground must be rich, or made so by a good coat of manure, as they have strong tapering roots. Digging or ploughing deep is very essential. To produce a constant succession of the Cabbage, it is necessary to plant at a number of times; also different varieties. For early use, sow in hotbeds in February or March; and for winter, the seeds may be sown in the open ground in May or June. When five or six inches high, transplant to from twelve to thirty inches apart. The plants should not be allowed to stand too thickly together, as this causes them to grow weak and feeble.

WINTERING CABBAGES.—If you have not a dry, airy, vegetable cellar, nor open she spare for burying them, take a sheltered part of the garden, and bury the roots, stalks, and of the head, in the earth; over which, in severe weather, place a good sprinking of straw a few boards. In southern latitudes, this is unnecessary; there they can withstand the cli-	v and
Early York. One of the oldest, most familiar, and, as an early market sort, one of the	CI 02.
most popular, of all the kinds now cultivated. The head is of rather less than	
medium size, roundish ovoid, close, and well formed, of a deep or ash green	
color; tender and well-flavored. Per pkt., 5	25
- Sugar-Loaf. Conical heads, with leaves erect; of a peculiar ashy or bluish-green	
hue; spoon-shaped; a fine variety for the Northern States, but in the South it	
loses its flavor and tenderness; said to be more affected by the heat than most	
early varieties. Per pkt., 5	30
- Wakefield. An English variety, similar in form to the Early York, and nearly as	
early; grows to a good size; a favorite with market-gardeners. Per pkt., 10	30
- Champion, Very early; dwarf and compact heads. Per pkt., 10	
- Drumhead, or Battersea. This is a round, flat-headed variety, of excellent	
quality; one of the latest among the early sorts. Per pkt., 5	25
- Schweinfurth. A valuable variety, both for earliness and large size; for summer	
and autumn use. Per pkt., 10	
Large York. This is a larger variety than the Early York, which it somewhat resem-	
bles. The head is broader, and more firm and solid; a favorite at the South, as	
it bears the heat well; two weeks later than Early York. Per pkt., 5	35
— Late Drumhead. Heads very large; round, sometimes flattened a little at the	00
top; close and firm; very hardy, and keeps well for a winter cabbage. Per	
pkt., 5	40
- French Oxheart. A French variety, which is taking the place of many others,	20
as it comes in after the Early York. It is tender, forms its heads readily, and	
well-flavored; a fine intermediate sort. Per pkt., 5	40
- Bergen, or Great American. Head remarkably large, round, flattened at the	40
top; compact; one of the largest and latest of all the Cabbages, and, when not	
fully perfected before being harvested, has the reputation, if reset in earth in	
the cellar, of heading, and increasing in size during the winter. It is a popu-	
lar market sort. Plants should stand three feet apart. Per pkt., 10	40
Stone Mason. This variety was originated by Mr. John Mason, of Marblehead, Mass.	40
It is characterized for its sweetness, and for its reliability for forming a solid	
head. It is also an excellent variety for extreme northern latitudes. Under	
good cultivation, nearly every plant will set a good head. Per pkt., 10	40
Mason's Drumhead. Large, round, solid heads; a very popular market Cabbage.	40
	40
Per pkt., 5	40
produced from the Mason or Stone Mason; in good soil, and with proper cul-	
ture, will average thirty pounds per head. Per pkt., 25	
Premium Flat Dutch. A low-growing variety; heads large, bluish-green, round,	
solid, broad and flat on the top, and often tinted with red and brown. As a winter variety, it has no superior. Per pkt., 5	40
Red Dutch, or Pickling. This sort is used mostly for pickling, and often cut in	40
shreds and served as a salad; medium size, oblong shape, and very solid; of a	01
deep-red or purple color. Per pkt., 5 Winnigstadt. This is a German variety, somewhat similar to the Oxheart, but more	99
regular; conical; heads very full and solid. It is an intermediate variety,	
which comes in after the Early York. All things considered, this is one of the	40
best for general cultivation. Per pkt., 5	40
SAVOY.	
None of the Cabbages are hardier or more easily cultivated. They should be sown early	and
when the seedlings are five or six inches high, transplanted or thinned out to three feet a The Savoys have more of the delicious richness of the Cauliflower, than any of the Cabb	part.
Drumhead Savoy. Head large, round, compact, yellowish at the centre, and a little	
flattened; in the form of the common Drumhead, which it nearly approaches	

MARBLEHEAD MAMMOTH DRUMHEAD. (See page 48.)

Green Globe, or Curled Savoy. One of the best and most familiar of the Savoys; medium size; does not make as firm a head as some, but, being very tender, the inner leaves will be found very good for the table. Per pkt., 5

Cauliflower (BRASSICA OLERACEA BOTRYTIS).

German, Blumen Kohl. - French, Choufleur. - Spanish, Coliflor.

This very delicate vegetable was first introduced into England from the Island of Cypress, and is classed among the most delicious of vegetables.

CULTURE.—The proper seasons for sowing seeds are, for the early spring or summer crop, between the 5th and 20th of September; and for the late autumn crop, about the 1st of April. The plants, as soon as they are two or three inches high, should be planted out in a bed of rich light earth, three inches apart each way, so as to grow firm and stocky, to remove to their final place of growth. For the purpose of growing them to perfection, use a bed of the richest light earth, two feet deep, made very rich with well-decomposed manure, surrounded by a frame covered with glass or shutters. Lift the plants carefully with a trowel from where they were transplanted, and plant them eighteen inches apart each way, into the pit or frame prepared for it; give a gentle watering, and press the soil down firmly. The frame should be surrounded with straw or litter of some kind; also, the glass or shutters should be covered with mats or dry straw in severe weather, observing to give plenty of air on mild and pleasant days, to prevent the plants from drawing or damping off at the neck; should be kept well watered; soap-suds is beneficial. For a late autumn crop, they require no particular care or skill, and not much labor, simply keeping them free from weeds, and the ground stirred frequently.

reig carry bore, broate be pranted in spring, one of the best 2 cr past, 10
London. A well-known variety, good for general use. Per pkt., 5
- Dutch. An intermediate variety, coming in after the above; heads large, white
and compact; fine. Per pkt., 5
Carter's Dwarf Mammoth. A very early hardy variety, of dwarf and compact
habit, with a firm white head; larger than the Walcheren; stand dry weather;
said to be one of the finest. Per pkt., 25.
Erfurt Earliest Dwarf. One of the best, if not the best, in general cultivation for
early forcing and open ground; very dwarf, leaves small, heads large and very
firm; pure white. Per pkt., 25.
Walcheren. A very early variety, with close compact head; a general favorite. Per

very early sort: should be planted in spring; one of the best. Per pkt., 10 1.50

Early Paris. Heads rather large, white and compact; leaves large, stalk short; a

Carrot (DAUCUS CAROTA).

German, Mohre. - French, Carotte. - Spanish, Zanahoria.

CULTURE. — The Carrot flourishes best in a good, light, well-enriched loam. If possible, the ground should be stirred to the depth of twelve to fifteen inches, incorporated with a liberal application of well-rotted compost, and well pulverizing the soil in the operation. The surface should next be leveled, cleared as much as possible of stones and hard lumps of earth, and made mellow and friable; in which state, if the ground contains a sufficient moisture to color

the surface when stirred, it will be ready for the seed. This may be sown from the 1st of April to the 20th of May; early sowing succeeds best. The drills should be one inch in depth, and from twelve to fifteen inches apart. The plants should stand from four to five inches apart.

De	eroz
Earliest French Short Horn. A very early variety; small size, and of excellent	
flavor. Fine for forcing; one of the best. Per pkt., 10	25
Early Horn. A very early variety, and as a table Carrot is much esteemed, both on	
account of the smallness of its heart, and the tenderness of its fibres. As the	
roots are very short, it will grow well on shallow soils. Per pkt., 5	20
Long Orange. A well-known standard sort. Roots long, thickest at or near the	
crown, and tapering regularly to a point; one of the best for table or field-	
culture, and requires a very deep soil. Per pkt., 5	15
Improved Long Orange. Similar to the above in form, but is larger, and of a	
deeper color; one of the best for general cultivation. Per pkt., 5	20
Altringham. Flesh bright and lively, crisp and breaking in its texture; the heart, in	
proportion to the size of root, smaller than that of the Long Orange. A fine	
variety. Per pkt., 5	15
Large White Belgian. Very large, and valuable for field-culture. Per pkt., 5	15
Large Orange Belgian. Similar to above, except in color. Per pkt., 5	15

Celery (APIUM GRAVEOLENS.)

German, Seleri .- French, Celeri .- Spanish, Apio.

Culture.—The seed should be sown in hotbeds in March, or in the open ground the last of April or first of May; but, when sown in the open ground, it vegetates very slowly, often remaining in the ground several weeks before it comes up. A bushel or two of stable manure put in a hole in the ground, against a wall or any fence facing the south, and covered with a rich fine mould three or four inches deep, will bring the seed up much sooner. Sufficient plants for any family may be started in a large flower-pot or two, placed in a siting-room, giving them plenty of air and moisture. As soon as the young plants are about three inches high, prepare a small bed in the open ground, and make it rich, and the earth fine. Here set out the plants for a temporary growth, placing them four inches apart. This should be done carefully; and they should be gently watered once, and protected for a day or two against the sun. A bed ten feet long and four feet wide will contain three hundred plants, and if well cultivated, will more than supply the table of a common-sized family from October to May. In this bed the plants should remain till the beginning or middle of July, when they should be removed into trenches. Make the trenches a foot or fifteen inches deep, and a foot wide, and not less than five feet apart. Lay the earth taken out of the trenches into the space in the middle, between the trenches, so that it may not be washed into them by heavy rains; for it will, in those cases, injure the crop by covering the heart of the plants. At the bottom of the trench put some good, rich, but well-digested compost manure; for if too fresh the Celery will be rank and pipy, or hollow, and will not keep nearly as long or well. Dig this manure in well, making the earth fine and light; then take up the plants from the temporary bed, and set them out carefully in the bottom of the trenches, six or eight inches apart.

Blanching.—When the plants begin to grow, hoe on each side and between them with a small hoe. As they grow up, earth their stems; that is, put the earth up against the stems, but not too much at a time, and always when the plants are dry. Be particular and not allow the soil to get between the stems of the outside leaves and the inner one, ast is injurious to the plants. In frosty weather, they should be protected by covering the tops of the trenches well with dry litter; this should not be allowed to remain longer than is absolutely necessary; it is well to cover the whole with boards to shed the rain.

as well to cover the whole with boards to shed the rains
per oz.
White Solid. Large, strong-growing variety: clear white, solid, and crisp. One of the
best for market or general use. Per pkt., 5
Seymour's Superb White. A large-sized vigorous-growing variety. Stalks white,
round, very crisp, and perfectly solid; considered one of the best. Per pkt., 10 30
Boston Market. A medium-sized, white variety; hardy, crisp, succulent, and mild-
flavored. A variety much grown by market gardeners about Boston. Per
pkt., 25
Cole's Crystal White. A fine variety for general use; dwarf, solid, crisp, and fine
flavored. Per pkt., 10
- Defiance Red. This is a comparatively new sort; medium-sized, solid, dark-red
color. Per pkt., 5
- Superb Dwarf Red. One of the best; dwarf, crisp, and fine flavored. Per
pkt., 5
Celery Seed. For flavoring soups, etc. Per oz., 15; per lb., \$1.25.

Chervil (SCANDIX CERIFOLUM.)

German, Gartenkerbel. - French, Cerfeuil.

CULTURE.—Chervil is an annual plant, and should be sown in March, April, and May, in drills about a quarter of an inch deep, and nine inches apart. Cover lightly, and press the soil firm with the foot; rake evenly, and give a gentle watering in dry weather. The leaves are fit for use when two to four inches high. Cut them off close; they will come up again, and may be gathered in succession throughout the season.

may be gathered in succession throughout the season.
Chervil. Per pkt., 10
Chicory (Cichorium Interus.)
A hardy perennial, introduced from Europe, often abounding as a troublesome weed in our pastures and mowing lands; is much used in Europe as a substitute for coffee, and large quantities of the prepared root are annually exported to this country for the same purpose. It may be raised to good advantage, and will pay a large profit, as its culture is simple. In the fail, the roots require to be taken up and cut in small pieces, and put where they will dry requiring the same treatment used for drying apples. When required for use, it should be roasted and ground like coffee. Persons who suffer from the deleterious effects of coffee, will find, by adding a portion of this, the difficulty removed, and the flavor of the coffee greatly improved; requires similar treatment to Carrots. **Large-rooted*, or Coffee*. Per pkt., 10.** **Large-rooted*, or Coffee*.
Corn, Indian (ZEA MAIS.)
German, Welschcorn.—French, Mais.—Spanish, Maiz.
Early White. One of the earliest of the table varieties; of low growth. Per pkt., 10. 25
- Burlington. A very early variety, much grown for the market; the ear good
size; an excellent table variety. Per pkt., 10
Darling's Extra Early Sugar is early, very tender, and sugary; yields well, pro-
duces little fodder, ears near the ground, and is one of the best sorts for early
use, as it seldom, if ever, fails to perfect its crop. This we consider the best for early use. Per pkt., 10
early use. Per pkt., 10
from twelve to sixteen rowed, and, in good soils and seasons, often measure
eight or ten inches in length, and nearly three inches in diameter; cob white;
hardy, productive, tender, and sweet; the best for general use. Per pkt., 10. 25
Mammoth Sweet. A very large and late variety; cob white; fine flavored; one of
the best. Per pkt., 10
Stowell's Evergreen Sweet. This variety is intermediate in its season, and, if
planted at the same time with the earlier kinds, will keep the table supplied till
October. It is hardy and productive, very tender and sugary, remaining a
long time in a fresh condition, and suitable for boiling. Per pkt., 10
Tusearora. A very large variety; eight-rowed; cob red; remaining a long time in a boiling state. Per pkt., 10
Golden Sweet. A hybrid between the common yellow and Darling's Early; quite
tender, and sweet, but less sugary than most of the sweet varieties. Per pkt., 10 35
Nonpareil, or Pop-Corn. A fine parching variety. Per pkt., 10
Rice. Hardy and prolific; good for parching. Per pkt., 10
Early Canada Yellow. Productive and early
King Philip, or Brown. Very productive, and is recommended as one of the best
field sorts now in cultivation. In good soil and favorable seasons, the yield per
acre is from seventy-five to ninety bushels; sometimes reaches as high as a
hundred and ten

Cress, or Peppergrass (Lepidium Sativum).

German, Kresse. - French, Cresson. - Spanish, Mastruco.

Early Dutton, or Golden Sioux. One of the handsomest of the field varieties;

The leaves, while young, have a warm, pungent taste, and are eaten as a salad, either separately, or mixed with Lettuce or other salad-plants.

CULTURE. - Sow rather thick in shallow drills, and at short intervals during the season. The Water-cress requires to be grown on the edge of a running stream or brook where it does not freeze too hard during the winter.

	r oz.
Broad-Leaved. A coarse variety, with broad spatulate leaves; sometimes grown for	
	10
Water. This is an equatic plant, with small oval leaves and prostrate habit. The leaves	
are universally used and eaten as an early spring salad. Per pkt., 10	50
Corn Salad, or Fetticus (Valeriana Locusta).	
German, Lammersalut French, Mache Spanish, Canonigos.	roz
An annual plant, cultivated for its tender leaves, which are esteemed as a winter and	1 02
early spring salad. The seed is usually sown in shallow drills, early in September. On approach of winter, cover the plants lightly with straw	10
Cucumber (Cucumis Sativus).	
German, Gurke French, Concombre Spanish, Cohombro.	
Culture, in the open air, is of the simplest character. Merely dig out a hole about a	. 6
wide and deep; fill it with rich, sandy soil; raise it above the surface about six inches, hills should be six feet apart each way. Any time in May sow a few seeds therein, and result is certain. If the weather be warm, they will grow in a few days. If the nights are protect them. There is frequently a little bug which preys upon the tender leaves; if so, and wood-ashes, sprinkled over them while wet with the dew, will retart the progress of depredator. As soon as the vines have made three rough leaves, nip the points off to make the branch out; they will fruit sooner by it. Three vines to one hill is quite enough. To young fruit in February and March is rather a nice operation; but any one who can come a few loads of warm horse-manure can have them from April to October. That the amateur tivator may have the article either for family use or for sale, a few hints may be in place forcing cucumbers. Prepare a frame, following the instructions haid down in the first pat this work for hotbeds. After the beds are in order, put in a good quantity of good, light, loam,—none better than the surface of the woods. In two or three days, the carth will be ciently warm for sowing the seeds. If the plants are to be removed into other frames, sow in pots; if not to be removed, sow them in a hill made in the centre of the bed by placing a rowful of soil in it. Cover the sash at night with straw mats, or any similar protection, and round the beds with litter or boards to protect it from the piercing winds. The seeds veg quickly, and soon grow into strong plants. During their growth, admit air every day as back of the frame, giving as much light as possible to the young plants. If the soil or p appear dry, give them water in the foremon which has been kept in the bed during the that it may be in a warm state,—the requisite temperature of the bed at night, from 65° to day, 75° to 100°. Early Cluster; fruit from three to four inches long, an inch and a half in dia-	
mter; generally produced in pairs; flesh tender, crisp, and well-flavored; comes	
into use ten days in advance of the Early Cluster, and makes a fine small pickle.	
	25
- Cluster. A very popular early Cucumber, producing its fruit in clusters near the	
root of the plant. Its usual length is about five inches; skin prickly; flesh	
white, seedy, tender and well-flavored; comes in about ten days later than the	
Early Russian. Per pkt., 5	15
fruit straight and well formed; flesh greenish-white, rather seedy, but tender,	
	15
- White Spine. One of the best table sorts, and greatly prized by market-men on	10
account of its color, which never changes to yellow. The fruit is of full medium	
size, straight, and well formed; skin deep green; prickles white; flesh white,	
tender, crispy, and of remarkably fine flavor; very productive, and good for	
forcing; sometimes known under the name of New York Market. Per pkt., 5	15
Long Green Prickly. This is a large-sized variety, and somewhat later than the	
White Spine; skin dark green, changing to yellow as the fruit approaches to	
maturity; flesh white, somewhat seedy, but crisp, tender and well-flavored;	
hardy and productive; makes a good pickle if plucked while young; well	
deserving of cultivation. Per pkt., 5	20
Extra Long Green Turkey. A distinct and well-defined variety; when full-grown,	
sometimes measuring nearly eighteen inches in length; form long and slender,	
with but few seeds; flesh remarkably firm and crispy; very productive and	

excellent. Per pkt., 5 . .

Endive (CHICORIUM ENDIVIA).

Scarlet-fruited. A highly ornamental variety. In general appearance, it resembles the common Egg-Plant; but the fruit, which is about the size of a hen's egg, is of a most beautiful scarlet; principally cultivated for its peculiar richly-colored

and ornamental fruit, which makes a fine garnish. Per pkt. 10,

German, Endivien .- French, Chicoree .- Spanish, Endvia.

CULTURE. — For the early crop, sow about the 1st of July. It will do on the ground where early Cabbages or Peas have come off, by giving it a coat of manure. Draw drills the depth of the hoe, one foot apart, and sow therein; sprinkle a little earth in the bottom of the drill, sufficient to cover the seed, which will be up in a few days. If dry weather ensue, water once or twice till the plants get hold. Thin then out when about two inches high, to ten inches apart; hoe freely, and keep clear of weeds. Being grown in these shallow drills, they are more easily earthed up, and grow better in warm, dry weather. When the leaves have attained about eight inches long, they are fit for blanching; for this purpose a dry day must be chosen. Gather up the leaves in your hand, in a close and rounded form; see that there is no earth or litter in their centre. The them up with a piece of cotton-twist or matting, which is to go several times round the plant, causing it to close at the top to prevent the rain from penetrating to and injuring its centre; then draw a little earth around its base for support. If the leaves are not perfectly dry when tied up, they will rot, or become so stained as to be unfit for the table. They will take about ten days in warm, and twenty days in cool weather, to blanch for use; a judgment may thus be formed of the quantity to be tied up at a time. For late crops, sow about the end of July.

n n	er oz.
Green-curled. Easily blanched; very hardy, and well adapted for winter use. One	
of the best. Per pkt., 5	40
White Curled, or Ever-Blanched. Leaves pale yellowish-green, nearly white when	
young; long, rather narrow; lobed, cut, and beautifully frilled or curled. Not	
so hardy as the green. Per pkt., 10	40
Broad-leaved Batavian. Leaves yellow-green, large, long, and broad; thick and	
fleshy. Chiefly used in stews, soups, etc. Called by the French, Chicoree	
Scarolle. Per pkt., 10	40
Fine Curled, or Moss. A new variety, with very fine curled leaves, much resembling	
moss. Per pkt., 10.	

Kohl-Rabi, or Turnip-rooted Cabbage.

German, Kohl-rabiuber. - French, Chou-rave. - Spanish, Col de nabo.

The Kohl-Rabi is a vegetable intermediate between the Cabbage and the Turnip. The stem, just above the surface of the ground, swells into a round fleshy bulb, in form not unfike a turnip; on the top, and about the surface of this bulb, are put forth its leaves, which are similar to those of the Swedish Turnip. The part chiefly used is the turnip-looking bulb, formed by the swelling of the stem. This is dressed and eaten with sauce or with meat, as turnips usually are. While young, the flesh is tender and delicate, possessing the combined flavor of the Cabbage and Turnip.

CULTURE. — Cultivate same as Cabbage; only that, in earthing up the plant, be careful not to cover the globular part. They should not be used before they have attained their full growth.

to be determined the state of t

eight lbs.: new. Per pkt., 10.

Leek (ALLIUM PORRUM.)

German, Lauch .- French, Poireau .- Spanish, Puerro.

CTLITEE.—There is no part of the garden too rich for Leeks. They require the best ground, well worked, and manured the full depth of the spade. Sow the seed thinly on a small bed of light, rich ground, in drills six inches apart and half an inch deep; rake it evenly, and give it a beat with the back of the spade.

When they come up, they should stand an inch apart; if thicker, thin them out. When grown to about eight inches high, they will be of sufficient size to plant out. As we have remarked, choose the best ground, draw thereon drills a foot apart, and as deep as the hoe will go. When ready, the plants are to be taken up from the seed-bed. Shorten their roots to about an inch from the plant, and cut two inches or more from the extremity of the leaves. Both these operations are done for convenience and neatness in planting. Dibble them in the drills eight inches apart, and as deep as the plant will admit of, not to cover the young leaves pushing from its centre. Choose moist or cloudy weather for the operation; but, if dry, give the plants a copious watering. Hoe the ground frequently, to keep down weeds, and, as the plants are observed to grow, draw the soil around them. By good culture, they will be fit for use early in October. On the approach of severe frost, lift sufficient for winter use, and store them away in earth or sand.

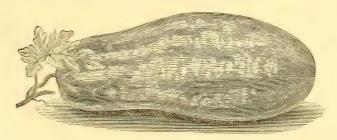

German, Lattich .- French, Laitue .- Spanish, Lechuga.

The Lettuce is generally divided into two classes; viz., Cabbage Lettuces and Cos Lettuces. The Cabbage have round heads and broad-spreading leaves; the Cos varieties have long heads, and upright, oblong leaves.

Celture. — A very rich soil is necessary to produce fine head Lettuce. Its crisp and tender quality depends very much on a luxuriant and vigorous growth. The earliest sowing may be made in February or March, under glass with slight heat. Keep the plants thin, and admit plenty of air to the frame every fine day. For later supplies, sow in the open ground as soon as the season will permit; transplant or thin out the plants gradually to a foot apart, and keep well cultivated. The Cos Lettuces are excellent if grown very early in the spring, but run to seed quickly in hot weather. The large Cabbage kinds are best, and most suitable for summer crops.

Early-curled Silesia. Standard sort; very early; the best for forcing and the first	er oz.
spring sowing; makes a loose head; tender, and of excellent flavor. Per	
pkt., 5	25
- Tennisball. One of the oldest and most esteemed of the Cabbage Lettuce. The	
head is below medium size; dark-green; very solid if grown in cool weather:	
one of the earliest and best. Per pkt., 10	30
- Royal Cape, or Summer Cape. Head roundish, usually well-formed, and	
moderately close and firm; good size; as a summer Lettuce, is one of the best.	0.5
Per pkt., 5	25
pale green without, and white at the centre; crisp and tender; fine summer	
variety. Per pkt., 5	25
Boston Curled. A new variety; one of the best for general cultivation. The elegant	20
frilling of the leaves, and fine form, make it very attractive; flavor very fine.	
Per pkt., 10	30
Royal Summer Cabbage. Head medium-sized, round, somewhat flattened, firm,	
and close. Per pkt., 5	25
Large India. Heads large and compact, similar to the Curled Silesia, but is less	
curled, and whiter; sometimes tinted with brown; heads round, crispy, and	
fine flavor; very popular as a market variety; one of the best for summer cul-	
ture. Per pkt., 10	40
Brown Dutch. A very hardy sort, enduring the winter with less protection than most other varieties; heads medium size, rather long, and loose; good flavor; gener-	
ally sown in the autumn. Per pkt., 5	40
Hammersmi'h Hardy Green. A very popular old variety. It is considered the	*0
hardiest sort in cultivation, and is one of the best for growing in winter or	
forcing. Per pkt., 10	40
Victoria Cabbage. An excellent early and hardy variety; is larger than Tennisball;	
heads freely, and is crisp and well-flavored; should be planted early. Per	
pkt., 5	40
White Paris Cos. This variety is grown mostly by London and Paris market-	
gardeners; tender, brittle, and mild-flavored. Per pkt., 10	40
Green Paris Cos. Considered one of the best of the Cos Lettuce. It has a tender,	40
brittle leaf; some days earlier than the White Cos. Per pkt., 10	40
Martynia (Martynia Proboscidia.)	
A hardy annual plant, with a strong branching stem two feet and a half high. The leave large, heart-shaped, entire, or undulated, downy, viscous, and emit a peculiar, must-like when bruised or roughly handled. The young pods are the parts of the plants used. These produced in great abundance, and should be gathered when about half grown, or while to	esare
large, heart-shaped, entire, or undulated, downy, viscous, and emit a peculiar, musk-like when bruised or roughly handled. The young pods are the parts of the plants used. They	odor e are
produced in great abundance, and should be gathered when about half grown, or while to	ender
and succulent: after the hardening of the flesh, they are worthless. They are used for pic and by many are considered superior to the Cucumber, or any other vegetable employe	ckies,
that purpose.	
CULTURE. — The Martypia is of easy culture. As the plants are large and spreading, should be two and a half feet apart in each direction. The seeds may be sown in April or in the open ground, where they are to remain; or the seeds may be sown earlier in a ho	they

Martynia. Per pkt., 10	er oz. 50
Melon, Musk Varieties (Cucums Melo.)	
German, Melone. — French, Melon. — Spanish, Melon.)	
CULTURE. — Plant in hills six feet apart each way, eight or ten seeds in each, and thin of three or four plants when in a state of forwardness. To grow good melons, the hills shon prepared by digging out the soil from one and a half to two feet deep, and two or three broad, according to the richness of the land. Add a very liberal quantity of the best deposed stable manure, and mix well with the soil, filling up a little above the general level, this mode, good melons may be raised on almost any soil. Seeds should not be put into the	out to dd be e feet com- By e hills
until the weather becomes settled and warm.	
Christiana. This variety originated in Beverly, Mass.; form roundish; size rather	er oz.
small; skin yellowish-green; flesh yellow, sweet, juicy, and of good quality;	
one of the best: ripens very early. Per pkt., 5	20

P.	er oz.
Green Citron. Fruit nearly round, but flattened slightly at the ends; medium size;	
flesh green, quite thick, and of the richest and most sugary flavor; comes in	
early, and makes a very popular market variety. Per pkt., 5	15
Nutmeg. Fruit oval, good size, thickly netted; flesh light-green, rich, sweet, melting,	
and highly perfumed; one of the finest. Per pkt., 5	15
Pineapple. Form roundish, inclining to oval; flesh green, melting, sweet, and per-	
fumed; early and productive. Per pkt., 5	15
Skillman's Fine-netted. This variety much resembles the Pineapple; flesh green,	
sugary, melting, and excellent; the earliest of all the green-fleshed varieties.	
Per pkt., 5	1.)
Large Yellow Cantelope. An oval variety; good-sized; skin yellow, marbled with	
green; flesh salmon-colored, sweet, highly perfumed, and of good flavor; early	
and productive. Per pkt., 5	15
- Musk. This is a very large, long oval shape; deeply ribbed; flesh very thick; yel-	
low, sweet, and juicy, with musky flavor; very early and productive. Per	
pkt., 5	15
New White Japan. A new variety from Japan, and decidedly the sweetest thin-	
skinned of the Musk Melon; color of fruit cream-white; flesh thick; size	
medium and nearly round. Per pkt., 10	50

MOUNTAIN-SWEET WATER-MELON.

Water-Melon (CUCURBITA CITRULLUS.)

German, Wassermelone .- French, Melond' Eau. - Spanish, Sandia.

The Water-melon is purely a tropical fruit, greatly appreciated for its refreshing coolness and delicious flavor.

CULTURE. — They require a light sandy soil, not over rich. Plant them in hills, as directed for Melons, giving them more room, as their vines extend much further. The seeds should be two years old before planting. If they are wanted of a large size, three or four fruit from each plant will be sufficient; and when one fruit only is taken, they will grow to from twenty to thirty pounds we late each. It will injure the flavor of the fruit if they are grown near to other varieties of the Melon.

varieties of the Melon.	06:161
Mountain Sweet. A large, long, oval variety; skin striped and marbled with different shades of green; flesh scarlet, and quite solid to the centre; very sweet and	er oz.
delicious. A fine market sort. Per pkt., 5	15
- Sprout, or Long Carolina. Resembling the preceding in most respects. A favorite market sort. Very fine quality, and productive. Per pkt., 5	15
Black Spanish. Form oblong; size large; skin very dark or blackish green; flesh deep-red, fine-grained, very sugary, and of excellent flavor. Hardy and pro-	
ductive; one of the best for general cultivation. Per pkt., 5	15
tender, and of remarkably fine flavor. Per pkt; 5	15
and of good quality. When in its mature state, the rind separates readily from	
the flesh, in the manner of the peel from the flesh of an orange. Per pkt., 10. Employed in making sweetmeats and preserves; form round, medium size;	
flesh white; very solid. Per pkt., 5	15

Apple-seeded. A rather small, nearly round sort; derives its name from its small, peculiar seeds. Flesh bright red to the centre, sweet, tender, and well-flavored; keeps a long time after being gathered. Per pkt., 10 30
Mustard (Sinapis Var.)
German, Seuf.— French, Montard.— Spanish, Mostaza. Culture.—This salad is cultivated in the same manner as recommended for Cress,—at all times of the year, sowing every week or two either in beds or drills, og for early use, in hotbeds, or boxes in the windows of a warm room. The seeds should be covered very slightly, and frequently watered, as moisture is indispensable to its growth. A bed three feet wide and twenty feet long, having the plants four or six inches apart, will produce a sufficiency of seed for every domestic purpose.
White, or Yellow. Very useful for salads, also for medicinal purposes. Per pkt., 5
Nasturtium, or Indian Cress (TROP.EOLUM.)
·
German, Kresse Indianische. — French, Capucine Grande. — Spanish, Capuchina.
There are many curious varieties of the Cress, though none so beautiful as the common Nasturtium. It has a sharp, warm taste, and is frequently used in salads. The green seeds are frequently pickled in vinegar, and are very palatable. Culture.—Sow the seed thinly, in rows or patches an inch deep, about the end of March or first of April. They will thrive almost any where if the ground is rich. They are peculiarly adapted to trellis-work, and form a rich, showy, and enlivening appearance. per oz.
Tall. Per pkt , 5
Okra, or Combo (HIBSICUS ESCULENTUS).
German, Essbarer Hibiscus French, Gombo Spanish, Quibombo.
This plant is cultivated, to some extent, as a vegetable; served in the same manner as Asparagus. The green seed-pods are used in soups, and deemed a luxury. It is becoming very popular since its introduction to us from the West Indies.
CULTURE.—The seeds are sown thinly, on dry, warm soil, in shallow drills two feet apart, about the same as the Lima Bean. Cover the seeds lightly. After the plants are up, thin them out to nine inches apart; hoe freely, and draw a little earth to the stems as they continue to grow. Gather the pods when quite green, and about an inch and a half long.
Long Green. Pods long and ribbed. Per pkt., 5
Onion (ALLIUM CEPA).
German, Zwiebel.—French, Ognom.—Spanish, Cebolla.
Culture.—The soil in general can not be too rich for this vegetable; and, however good it may be, it requires more or less manure for every crop. Unlike most vegetables, it succeeds well when cultivated on the same land for successive years, provided it is liberally supplied with nutrition. Previous to sowing, the ground should be thoroughly spaded over, or deeply ploughed, and the surface made smooth and even. The seed should be sown as early in spring as the soil may be in good working condition. Sow in drills fourteen inches apart, and half an inch in depth. When the plants are three or four inches high, thin them out to two inches apart. If the weather is moist, the thinnings may be transplanted into other ground. They, too, will attain full size; but observe, in planting, to put the roots only under ground. To grow Onions for pickling, sow the seed thinly in March or April. No furthar culture is required, except hand-weeding, as their thickness in the bed will prevent their growing large, and will cause them to come to maturity sooner. The seed should be thoroughly dried, for when stored in a damp state, it is liable to generate heat, and consequently to lose its vitality. Per 02.
Early Red. A sub-variety of the Large Red Wethersfield, and the earliest of the Red Onions. Form and color nearly the same as Large Red; close-grained, mild,
and a good keeper. Very productive. Per pkt., 5
moderately fine-grained, and stronger flavored than that of the yellow and ear-
lier red varieties. Very productive, and one of the best to keep; the variety mostly grown at Wethersfield. Per pkt., 5
the medium size; globular in form; skin yellowish-brown; flesh white, sugary, comparatively mild and well-flavored. Very productive; one of the most pop-
ular for general cultivation. Per pkt., 5

DANVERS YELLOW ONION. per oz. Yellow Dutch, or Silverskin. One of the oldest varieties; and, as a market variety, probably better known and more generally grown in this country than any other, Flesh white, fine-grained, mild, sugary, and well-flavored. Per pkt., 5 20 White Portugal, or Spanish. A very large, flat onion. Skin loose, of a mild flavor; fine for early winter use, but decays early. Per pkt., 5 Top. or Button Onion. Bulbs large, a little flattened; producing, instead of seeds, a number of small bulbs or onions, about the size of filberts, which serve as a substitute for seeds in propagation. The bulbs are liable to decay, and should be kept in a cool, dry place, away from frost 50 Potato Onion. Producing a quantity of young bulbs on the parent root, which should be planted in rows, in April, three inches deep (below the surface) and six inches apart; the rows should be eighteen inches apart. Keep them free from weeds, and earth them up like potatoes as they continue to grow; when grown, may be treated as other onions . . . Parsley (APIUM PETROSELINUM). German, Petersilie. - French, Persil. - Spanish, Peregil. CTLITEE.—Sow it in drills half an inch deep, early in April. These drills may form an edging round any compartment of vegetables, or along the walks. When the plants are three or four inches high, thin them out to six inches apart. To keep a young stock constantly for use, cut down about a third part at a time. Root out the plain-leaved, should any appear. Keep it only from severe frost, and it will grow the whole winter. For this object, select a warm spot of ground, light and rich; sow it early in the season; cut them all over in September; surround the bed, early in November, with boards, and cover with mats or shutters; glass is much better, if it can be obtained. By this process, a sufficient supply will always be obtainable. Plain Parsley. The leaves of this sort are plain, or not curled; but it is better flavored than the curled for soups, etc. Requires a slight protection, during the winter, of straw, pine boughs, or leaves. Per pkt., 5 Curled, or Double. A fine dwarf variety, tender; leaves yellowish-green, and beautifully crimped and curled. Fine for garnishing dishes for the table. Per Hamburg, or Rooted. The roots are principally used for flavoring soups, Per pkt., 10 . Parsnip (Pastinaca Sativa). German, Pastinake. - French, Panais. - Spanish, Pastinaca. The Parsnip is a biennial plant, similar to the Onion, Turnip, and Carrot, in duration. It is both wholesome and nourishing, and desirable for winter and spring use. CULTURE.—It succeeds well in a rich sandy loam. Sow early in the spring, in drills tolerably deep; scatter the seeds thinly, and cover evenly with the rake. After the appearance of the seed, the soil must be stirred with the hoe frequently, until the leaves cover the ground; they will stand any severity of frost. One cunce of seed its sufficient to supply a family. per oz. Long Smooth. Roots long, white, smooth, and regularly tapering to the end; free from side-roots; tops small, slightly tinged with red at the crown. Very hardy, keeping through the winter where grown without any protection; one of the

Hollow Crown. Roots oblong, ending somewhat abruptly with a small tap root; grows mostly below the surface. Best garden variety. Per net., 5 15 The Student. A new variety, of delicious flavor, ennobled from the wild Parsnip by Prof. Buckman, of the Royal Agricultural College, Cirencester, England. A great acquisition. Per pkt., 10	
German, Erbse French, Pois Spanish, Guizante.	
Culture.—Peas, for an early crop, should be sown as soon as the ground is in working condition. The soil for their reception should be light, dry, and well sheltered. Mild manure such as leaf-mould, has a beneficial effect; but for many of the varieties the soil can hardly be too rich. For general crops, the ground should be well manured the previous year, which causes them to yield more abundantly. They are usually planted in double rows three or four feet apart, and covered to the depth of two and a half or three inches. This is the average depth, though some contend that greater depth prevents the premature decay of the vines. The height of the Pea depends much upon the moisture and richness of the ground. The method of planting Peas in hills with Potatoes of an early variety has been found successful In dry weather, soak the Peas a few hours before planting. Pour water into the drills, where the ground is dry, before sowing the seed, which will cause them to grow at once, should the season continue dry. A pint of the small-seeded sorts will sow a row about sixty feet in length and the same quantity of larger varieties, being sown much thinner, will make a row of nearly a hundred feet. The crop should be gathered as it becomes fit for use. If even a few of the pods begin to ripen, young pods will not only cease to form, but those partly advanced will cease to enlarge.	ehresel.ne;yell
Early Dan O'Rourke (Pure). One of the earliest varieties in cultivation; pods well	
filled; of good size and quality; of the finest flavor; grows about three feet high	
abundant bearer; an excellent variety to come in after the above 30	
Carter's First Crop, or Sutton's Ringleader. This is a new English variety, introduced by Carter and Co., of London. It has proved to be the earliest Peagrown; also very prolific; height two and a half feet. 25 cents per half-pint 1.00 Hovey's Extra Early. Unequaled in earliness; very productive; two and a half feet	
Early Kent. A very popular early Pea; fine pods; two and a half feet 30	
Drew's New Dwarf. This fine Pea is remarkable for its dwarf and branching growth, forming a bush one foot high and one foot broad; consequently, only about one plant to each foot of row is required. It is medium in earliness, and extremely productive, each plant producing, with good culture, forty or fifty pods of rich,	
fine-flavored, large Peas	
McLean's Little Gem. A dwarf, prolific, green wrinkled Marrow; habit similar to Beck's Gem or Tom Thumb, and is a first early; a great acquisition; height one foot	
- Advancer. A dwarf, green wrinkled Marrow of fine flavor; long pods, well filled	
up; very prolific; nearly as early as the Dan O'Rourke; a comparatively new	
variety	
- Princess Royal. A very prolific, long-podded, early variety, of fine sugary	
flavor; one foot high; pods large, well filled; very productive 50 — Prolific. A dwarf early variety, coming in after the Dan O'Rourke; white	
wrinkled, with the Marrow flavor. Per half-pint, 25	
Early Prince Albert. An old well-known variety; early and productive; three feet 40	
- Washington. A standard sort; very early and prolific; three feet 30	
Tom Thumb (Beck's Gem.) Plants of remarkably low growth, seldom exceeding nine	
inches in height; stout and branching; pods about two and a half inches in	
length, containing five or six peas, which are of a creamy-yellow; fine flavor;	
very productive. It may be cultivated in rows ten inches apart. No stick required	
Bishop's New Dwarf Long-podded. Stems about two feet high; pods nearly	
straight, almost cylindrical, containing six or seven white peas; very early;	
an abundant bearer, and of excellent quality	

· ne	r qt.
Carter's Surprise. A new variety of the Blue Surprise; pods large, very productive,	-
and fine quality; an excellent market variety. Half-pint pkts., 25	50
Alliance, or Eugenie. Plant about three feet in height, with pale-green foliage; pods	
single or in pairs, three inches long, containing five or six peas. When ripe,	
the peas are of medium size, cream-colored, and much shrivelled and indented;	
the earliest white wrinkled Marrow Pea in cultivation	50
Champion of England. A standard sort, considered by all to be the best grown	
for general crops of delicious flavor; very productive, and growing from three	
	40
Champion of Scotland. This we consider one of the best for main crop; of rich,	
buttery flavor; very productive, and of large size	55
Blue Imperial. This is considered by many as a standard sort; very hardy, and	
	30
Large White Marrowfat. An excellent and profitable sort; a little later than the	
preceding; pods large and full; very productive growing; from three to five	
feet	25
Black Eye Marrowfat. An excellent variety; growing about three feet high; pods	
large and full; a prolific bearer, and can be recommended as one of the best of	
the Marrowfat varieties	25
Pepper (CAPSICUM.)	
German, Pfeffer. French, Piment. Spanish, Pimiento.	
German, Pfeffer.—French, Piment.—Spanish, Pimiento. Capsicum or Pepper is a tender annual, much esteemed for its seasoning qualities. I the various methods of preparation, it imparts vitality and promotes digestion. It is extens used for pickling.	
Capsicum or Pepper is a tender annual, much esteemed for its seasoning qualities. It the various methods of preparation, it imparts vitality and promotes digestion. It is extens used for pickling. Culture.—The plants are always propagated from seed. Sow in a hotbed early in A in shallow drills six inches apart, and transplant to the open ground when summer weather commenced. The plants should be set in warm mellow soil, in rows sixteen inches apart, about the same distance apart in the rows; or, in ordinary seasons, the following six method may be adopted for a small garden, and will afford an abundant supply of pepper family use. When all danger from frost is past, and the soil is warm and settled, sow the in the open ground, in drills three-fourths of an inch deep, and fourteen inches apart; while growing, thin out the plants to ten inches apart in the rows. Cultivate in the usual ner, and the crop will be fit for use early in September.	pril, r has and mple rs for seeds and, nan-

Potato (Solanum Tuberosum.)

sweet, mild, and pleasant; used for salads and pickling. Per pkt., 5 . . . 50

German, Kurtoffel .- French, Pomme de Terre.

Culture.—A sandy loam is better calculated for the Potato than a heavy or very clayey soil. Though any soil will do, be it must observed that the roots produced in a light one are more dry and sweeter than those grown in a heavy soil. The finest Potatoes are grown in a new, light, rich loam. If the soil is heavy, the manure used should be composed of well-decayed leaves, horse manure, and ashes, well blended and mixed together before using. A good crop can soldom be raised if this article is sparingly laid on. Sets for planting should be cut at least one week before planting, and spread out thin on a floor to dry. Another important consideration is, whether small tubers or large ones should be employed for making sets. Large tubers, however, are preferable, for the following reasons: In all plants, large buds tend to produce large shouts; a 3d small or weak bals, the reverse. Now the eyes of Potatoes are true buds, and in small tubers they are comparatively weak: they consequently produce weak shoots, and the crop from such is inferior to that obtained from plants originating from large tubers furnished with stronger eyes. The part of the Potato planted is not a matter of indifference. It was found, by an experiment made in the Garden of the Horticultural Society, that sets taken from the points of the tubers yielded at the rate of upwards of three tons per acre more than was obtained from employing the opposite end of the tubers.

Potatoes are usually planted either in hills or ridges, the former method being the most common in this country. As soon as the plants are fairly started above the surface, hoeing and surface stirring should be commenced. The earth should gradually be drawn about the hills, or along the ridges at each successive hoeing, and every encouragement given to the side-roots to extend themselves; for, nearly at their extremities, the tubers are formed; so that deeply stirring the ground between the hills or ridges tends to their extension. But this treatment must not be carried beyond a certain stage in the growth of the plant, or after the tubers have reached a considerable size, as the extremities of the roots might be seriously injured. In the preservation of Potatoes, it is of the first importance that they be excluded from light. In a state of complete durkness, they should, therefore, be placed, the day may are taken out of the
of complete darkness, they should, therefore, be placed, the day may are taken out of the
ground. Drying has a bad effect on the skin of the Potato.
per bush,

per bush,
Early Sovereign. A favorite early variety, of excellent quality; very productive, and
a good keeper
Extra Early White. An early and well-known variety. Very productive, and of
good flavor
Early York. One of the largest of the early. Very productive, of uniformly good
quality; keeps well; one of the best for general cultivation
Jackson White. Flesh perfectly white when cooked, remarkably dry, mealy, farina-
ceous, and well flavored. A good keeper, commands the highest market-price,
and, everything considered, must be classed as one of the best, and recom-
mended for general cultivation
Goodrich's Early. One of the largest and earliest varieties; two weeks earlier than
the Jackson White, and one of the most productive, - two hundred and fifty
bushels having been grown to the acre. \$1.00 per peck, \$8.00 per bbl 4.00
- Garnet Chili. This variety is healthy, yields abundantly, and is greatly superior
to many sorts for table use, and might be profitably grown for family purposes.
Cuzco. White flesh, good size and flavor. A most abundant bearer; keeps well; good
for a general crop
Calico. A seedling of the Garnet Chili, a little earlier than that variety; has a firm,
crisp flesh; cooks white and dry
Early Sebec. One of the earliest and best varieties yet produced, large and fine
Potatoes, having been raised in just sixty-three days from the time of planting.
In general appearance, it resembles the Jackson White, from which it is prob-
ably a seedling. \$5.00 per bbl
Harrison. New, large, and smooth, with full eyes, white skin and flesh, sound and

Pumpkin (CUCURBITA PEPO).

German, Kurbis. - French, Courge. - Spanish, Calabaza,

We can not think of admitting this vegetable into the precincts of the garden where there are Cucumbers, Melons, and others of similar class. It would mix with and contaminate the quality of the more valuable sorts; besides they would occupy more space than most could allow, as many of the varieties attain an enormous size.

CULTURE.— Pumpkins are not so particular in regard to soil as Melons or Cucumbers, but in other respects, are cultivated in a similar manner, though on a much larger scale. They are generally raised on cultivated farms, between hills of Indian Corn, and may be planted with success in fields, by themselves.

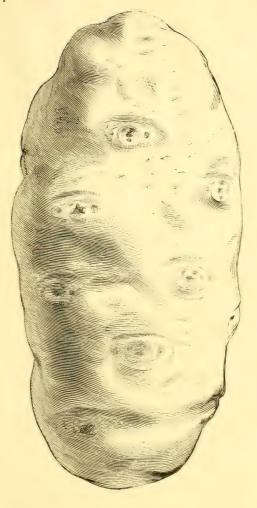

Cheese, Medium-sized. One of the best for cooking purposes. Per pkt.	, 5		. 10
Large Yellow. Grows to a large size; better adapted for feeding purp	oses	than	for
cooking. Per pkt., 5. Per b., 40. Mammoth. A very large coarse-growing variety. Per pkt.,			. 40

Radish (RHAPHANUS SATIVUS).

German, Rettig Radies. - French, Radis, Rave, Petite, Rave, - Spanish, Rabano,

The Radish is a hardy annual plant, much esteemed for its grateful relish, and is extensively cultivated for its roots. Its excellence consists in being succulent, mild, crisp, and tender; and the roots should be eaten before they are overgrown, which makes them tough and thready. The seed-pods are excellent for pickling if gathered while young and green.

CULTURE.— For early crops, sow in spring, as soon as the ground can be worked, in light rich soil; for later crops, a deep, moist soil is preferable. Sow the seed thinly in drills, covering them with about a quarter of an inch of fine earth. If space is limited, the seed may be sown

FARLY GOODRICH POTATO.

IN FULL SUPPLY.

See page 92.

with Onions or Lettuce; they are said to be much less affected by the magget if grown with the former. The plants should be frequently and copiously watered in dry weather, which tends to their rapid growth, thus securing its excellent qualities. For very early use, sow in gentle hotbeds.

Pe	eroz
Early Short-top Long Scarlet. Roots long, growing partly out of the ground, of a	
beautiful deep pink color; flesh white, transparent, crisp, and of a good flavor.	
Grows quick; standard sort for marketing or private use. Per pkt., 5	15
Scarlet Turnip. A very early variety, deserving general cultivation on account of its	
rich color, crisp and tender qualities; should be used while young. Per pkt., 5	15
White Turnip, Bulb similar to the preceding. Skin white; flesh white and semi-trans	
parent. Some days later than the scarlet. Per pkt., 5	15
Scarlet Olive-shaped. In the form of an olive, terminating in a very slim tap-root.	
Skin fine scarlet; neck small; flesh rose-colored, tender, and excellent. Early,	
and well adapted for forcing or general crop. Per pkt., 5	15
Long Salmon. A fine variety, in size and form similar to the Early Short-top Long	
Scarlet, but is a paler red; coming in a few days later. Per pkt., 5	15
Black Spanish. One of the latest as well as the hardiest of the Radishes, and is con-	20
sidered an excellent sort for winter use. Large size; color black; of a firm	
texture. To keep well, should be packed in sand. Per pkt., 5	15
Long White Chinese. Skin white and of fine texture; flesh fine-grained, crisp, and	20
very good flavored. Its season the same as the preceding. Per pkt., 10 .	20
Rose-colored China Winter. Size full medium; skin comparatively fine, and of a	00
bright rose-color; flesh firm, and rather piquant. A very late variety. Per	
pkt., 10.	20
New French Breakfast. A new quick-growing variety. Oval form; color scarlet,	90
tipped with white; fine flavored. Very ornamental in appearance; much	
	25
esteemed by the French. Excellent for forcing. Fer pkt., 10	20

Rhubarb (RHEUM HYBRIDUM).

German, Rhubarber. - French, Rhubarbe. - Spanish, Ruibarbo Bastardo.

CULTURE.—Rhubarb succeeds best in deep, somewhat retentive soil. The richer its condition, and the deeper it is stirred, the better. Sow in drills an inch deep. Thin out to six inches apart. In the fall trench a piece of ground, and manure it well; then transplant the young plants into it three feet apart each way. Cover with leaves or litter the first winter, and give a dressing of coarse manure every fall. To procure an immediate crop, plant roots which are already grown.

Victoria. A large variety; one of the best for general use.	Per	nkt	5		pe	r oz. 25
Linnœus. Large, tender and fine-flavored. Per pkt., 5						25
Champagne. New large scarlet, very tender. Per pkt., 10						25
Cahoon's Mammoth. Very large. Per. pkt., 10						25

Salsify, or Oyster Plant (TRAGOPOGON PORRIFOLIUS.)

German, Bocksbart. - French, Salsifis. - Spanish, Ostra regetetal.

The Salsify is a hardy biennial plant, and is principally cultivated for its roots, which are long and tapering, and, when grown in good soil, measure twelve or fourteen inches in length. It is considered wholesome and nutritious. When cooked, the flavor resembles that of an oyster, and is a good substitute for it; whence the popular name.

CLITTE.—This plant succeeds best in a light well-enriched soil, which, previous to sowing, should be stirred to the depth of twelve or fourteen inches. Sow the seed in drills half an inch deep, and ten inches apart, early in the spring. Thin them out, when an inch high, to four or six inches apart. Keep the ground clear of weeds, giving them the general culture of carrots. They are perfectly hardy, and may remain out all winter. Store a quantity for winter's use, packed in earth or sand. Those remaining in the ground should be dug before commencing growth in spring.

Scorzonera, or Black Salsify (Scorzonera HISPANICA).

German, Schwarzwurzel. - French, Scorzonere. - Spanish, Escorzonera.

Sea Kale (CRAMBE MARITAMA).

German, Selkohl Meerkohl .- French, Crambe Maritime .- Spanish, Breton de mar.

This plant is found growing on the seacoast of Europe, particularly in England. It is closely related to the Cabbage, and can be obtained with very little trouble. The mode of dressing this vegetable for the table is the same as that for Asparagus, which it much resembles.

CULTURE.—The seeds may be sown in April, in drills an inch and a half deep, and fourteen or sixteen inches asunder. The soil must be previously well enriched and thoroughly trenched. Let the plants remain until the following spring, then transplant them in rows three feet apart, and eighteen inches apart in the rows. The earth should be occasionally stirred when the rains have run the surface together. Lute in the fall, cover the crowns of the plants with a few inches of earth, making a ridge over the rows about a foot and a half high. After the cutting is over in the spring, level the earth into trenches, adding a good coat of strong manure.

Spinach (SPINACIA OLERACEA).

German, Spinat. French, Epinard.—Spanish, Espinaca.

Spinach is very hardy, and consequently a very important vegetable for cold climates. It is extremely wholesome and palatable.

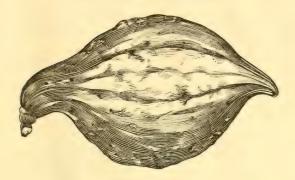

CULTURE. Spinach is best developed and most tender when grown in rich soil. It should be heavily manured and deeply trenched. Sow early in March for summer crop, in drills, which method renders the cultivation and the gathering of the produce more convenient. Encourage the growth with frequent hoeing, which draws the moisture to the roots. For a succession, a few seeds of the summer varieties may be sown, at intervals of a fortright, from April to August. Sow from the middle of August to the beginning of September, for the winter crop, in a light sandy sil, on raised beds, which enables it better to stand the severe frost. This, too, must be well manured, and deeply trenched. Scatter the seed thinly in drills as for the summer varieties, one to three inches deep, from twelve to eighteen inches apart, and cover them with the finest of the soil. Thin the plants as soon as they are strong enough to draw, leaving them about nine inches apart in the row. Two ounces of seed will plant five drills, each forty feet long.

Squash (CUCURBITA MELO PEPO).

German, Kurbiss. - French, Courge. - Spanish, Calabasa tontanera.

CULTURE.—Any good enriched soil is adapted to the growth of the Squash. They only thrive well in a warm temperature, as all the varieties are tender annuals; and the seed should not be sown in spring until all danger from frost is past, and the ground is warm and thoroughly settled. The hills should be made from eight to ten inches in depth, manured well, and covered about three-fourths of an inch deep. Keep the earth about the plants lose and clean, removing the surplus vines from time to time, allowing not more than three plants to a hill. The custom of cutting or nipping off the leading shoots of the running varieties is now practiced to some extent, with the impression that it both facilitates the formation of fruitful laterals and the early maturing of the fruit. Whether the amount of product is increased by the process, is not yet determined.

Early Egg, or Apple. Skin yellowish-white, thin; flesh dry and well-flavored in its - Yellow Bush Scolloped. An early, flat, scollop-shaped sort; color, yellow; flesh pale yellow, tolerably fine-grained, and well-flavored; very productive. Per pkt., 5 15 - White Bush Scolloped. This is a sub-variety of the Early Yellow Bush. The plant has the same dwarf habit, and the fruit is nearly of the same size and form. Per pkt., 5. 15 - Summer Bush Crookneck. This is generally esteemed as one of the finest of the summer varieties; color bright yellow; skin very warty, thin, and easily broken; flesh dry and well-flavored; should be used while young. Per pkt., 5 15 Boston Marrow. Form ovate; skin thin; when ripe, bright orange; flesh rich salmonyellow, very dry, fine-grained, and for sweetness and excellence unsurpassed; a very popular variety in the Boston market; a fall and winter variety. Per 20

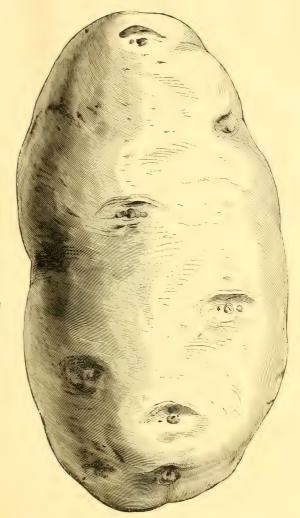

HUBBARD SQUASH. Hubbard. This is a superior variety, and the best winter Squash known; flesh bright orange-yellow, fine-grained, very dry, sweet, and rich-flavored; keeps through-Fall or Winter Crookneck. The kind most generally cultivated in New England for fall and winter use; flesh salmon-red, very close-grained, dry, sweet, and fineflavored; keeps well. Per pkt., 5 Honolulu Nectarine. Productive, and of good quality; keeps well. Per pkt., 10 . 25 Valparaiso, or Lima Cocoanut. A large-growing winter variety; a good variety Custard. Skin or shell creamy-white; flesh pale yellow; not remarkable for solidity or fineness of texture; one of the hardiest and most productive. Per pkt., 5 . 20 Mammoth. This is the largest variety known, and under favorable conditions of climate, and in rich soil, it often grows to the weight of from a hundred to a hundred and forty pounds. Per pkt., 25. Turban, or Turk's Cap. A superior late-growing variety. At the blossom-end, the fruit suddenly contracts to an irregular cone-like point or termination; of a greenish color, striped with white; and thus in form and color somewhat resembling a turban, whence the name; flesh orange-yellow, thick, fine-grained, sugary, and well-flavored. Per pkt., 10. Yokohomo. A new variety from Japan; finest-grained of all the Squashes, with a rich marrow flavor. Per pkt., 15. Tomato (SOLANUM LYCOPERSICUM). German, Liebesapfel. - French, Tomate. - Spanish, Tomate. There is no vegetable on the catalogue that has obtained such popularity in so short a time, as the one now under consideration. It may be served in various ways, and, in nearly every form, is highly esteemed. CULTURE. - The Tomato is raised from seeds, which should be sown in a hotbed in March, or in pots in a warm window. They should be started as early and forwarded as rapidly as possiin pots in a warm window. They should be started as early and forwarded as rapidly as possible, whether by hotbed or open-air culture. When about two inches high, they should be transplanted, in single plants, to warm, light, rich soil. Water freely, at the time of transplanting. Shelter from the sum for a few days, or until they are well established. If sown in the open ground, select a sheltered situation, pulverize the soil finely, and sow in drills. This may be done the last of March or first of April. When the plants are three or four inches high, transplant is a before a sheat of some the last of the contract plant to where they are to remain, as before directed. Early Apple-Shaped. A very early and productive variety; round, smooth, and of

medium size. Per pkt., 5

Large Smooth Red. Fruit somewhat flattened, inclining to globular in its general outline; medium size; skin deep rich crimson; flesh bright pink or rose color; one of the best for general cultivation. Per pkt., 5

Lester's Perfected. Of recent introduction: regular form; large size; flesh firm and well-flavored. Per pkt., 5

p.	er cz.
Large Red. A very early variety, of large size; skin bright red; flesh pink or rose	
color. Per pkt., 5	30
Pear-shaped. A small, red, pyriform or pear-shaped variety; fine for preserving.	
Per pkt., 10	
yellow skin, and yellow flesh; little used except for preserving and pickles.	
Per pkt., 5	
Red Plum. Remarkable for its symmetry, and for its uniform size. It is hardy and	
productive; used principally for preserving and pickles. Per pkt., 5	
Yellow Plum. Similar to above, except in color, which is bright yellow. Per pkt., 10	
Cherry. A small variety, growing in clusters. Per pkt., 10	
Grape. A quite small red variety, growing in long clusters, like grapes, and useful for	
preserves; a new variety. Per pkt., 10	
French Tree (Tomato de Laye). A new French variety, growing erect, in tree form;	
very ornamental, as well as large, and one of the best flavored. Per pkt., 10.	
Fejee Island. Fruit large, bright red, sometimes ribbed; often smooth and well-filled	
to the centre. Per pkt., 10	85
White Tomato. Similar to the Large Red, except in color. Per pkt., 10.	
Early York. One of the very earliest varieties; of good size, productive, and excellent	
flavor. Per pkt., 5	50
Cook's Favorite. A comparatively new variety; medium size, oval form, fair skin,	
deep crimson, very productive, and excellent flavor; one of the best for general	
cultivation. Per pkt., 5	40
Tilden's New Seedling. It is rather dwarf in its habit, and has distinct and peculiar foliage. The fruit is large, roundish, or roundish-oval in shape; skin smooth,	
glossy, and of a bright-red color; flesh remarkably solid. Per pkt., 5	
Eureka. A new and fine variety, introduced by Mr. Perriam, of Chicago, who says:	00
"I consider it superior to any thing I have ever grown." Dwarf, early, bush-	
shape, and prolific. Per pkt., 25.	
Turnip (Brassica Rapa).	
German, Steckrube French, Navet Spanish, Nabo comun,	
This is a wholesome and useful plant, both for man and beast, and highly deserving of vation. It has become, in some countries, an extensive field-crop.	
CULTURE.—All the sorts are propagated by seeds, which should be sown where the plant to remain, as they do not generally succeed well when transplanted. Sow as early a	ts are
ground will allow, in drills fourteen inches apart, and half an inch in depth. The young p	sthe
should be thinned to five or six inches as under. When the bottoms begin to enlarge, re	move
the earth gently to the depth of an inch and a half, and apply wood-ashes. The sowing for winter's supply is made in August. One thing must be observed—to have the ground all	r the
fresh dug before sowing. Turnips must be harvested before severe freezing weather; for, the comparatively very hardy, few of the varieties will survive the winters of the Northern St.	ough
comparatively very hardy, few of the varieties will survive the winters of the Northern S in the open ground. Cut the leaves off to about half an inch from the bulb; collect the	ates,
and put them in a dry pit or cellar: cover with straw and earth over all. Thus protected.	thev
and put them in a dry pit or cellar; cover with straw and earth over all. Thus protected, will keep fresh till February. The seed will retain its vitality for three years, if kept in place. If it is two years old, soak it in water twenty-four hours before sowing.	a dry

Yellow Aberdeen. A hardy and productive variety; flesh pale yellow, tender and	r oz.
sugary; keeps well. Per pkt., 5	10
Early Yellow Dutch. A variety similar to the preceding, and is a good garden vari-	10
	10
ety. Per pkt., 5	10
Large White Norfolk. A sub-variety of the Common Flat Turnip; grows to a large	
size; flesh white and coarse-grained, but sweet. Per pkt., 5	10
Long White Tankard. This variety is recommended for its earliness and produc-	
tiveness, but must be considered a field rather than a table variety. Per pkt., 5	10
Red Top Tankard. Similar to above, except in color. Per pkt., 5	10
Long White, or Cow-horn. An excellent variety; grows quickly to a good size;	
flesh white, fine-grained, and sweet. It keeps well, and is esteemed by many	
the best of all for culinary purposes; to have it keep well, gather before severe	
frosts. Per pkt., 5	10
	10
- French, or Sweet German. One of the very best for winter or spring use,	
either for the table or for feeding stock. The flesh is firm, sweet, and of excel-	
lent flavor; none better for keeping; should be sown in June. Per pkt., 5	10
RUTA-BAGA, OR SWEDE TURNIP.	
Skirving's Purple-top. This is a superior variety, hardy and productive; flesh yel-	
low, of solid texture, sweet and well-flavored. It is a good keeper. Per pkt., 5	10
, , , , , , , , , , , , , , , , , , , ,	10
Early Stubble Swede. This is recommended for its quick growth, and is well adapted	
for late sowing; flesh firm and well-flavored; very productive. Per pkt., 5.	10
White's Eclipse, or Hybrid. A comparatively new variety, and excellent for early	
feeding purposes. Large size, and well-flavored. Per pkt., 5	10
Laing's Improved Purple-top. A superior variety, hardy and productive. Flesh	
yellow, solid, and well-flavored; one of the best. Per pkt., 5	10

AROMATIC, POT, AND SWEET HERBS.

The generality of Aromatic, Pot, and Sweet Herbs, may be raised from seed sown early in spring. As only a small quantity of these are necessary for family use, they may occupy a corner by themselves. They thrive best in a mellow, free soil, and care should be exercised to harvest them at the proper time. The greater part of the following-named Herbs are perennial, and will multiply from the seed they drop, or from partings from the roots. The offsets, roots, or young plants, thus raised, should be planted at suitable distances from each other. The beds should be kept free from weeds; and, as the herbs come into flower, cut them on a dry day, and spread them in a shady place to dry for use. The best method for preserving them is to rub them through a selve when thoroughly dry, and pack them in the boxes. Be careful to put them in a dry place. Price—per pkt., 5; by the ounce on application.

GRASS SEED FOR LAWNS.

One of the most pleasing features connected with a garden is a well-kept lawn; but, to secure this most desirable object, much depends upon the selection of such grasses as will present a fresh and luxuriant verdure throughout the season. For this purpose, a mixture of several kinds of the finer grasses is most suitable. These we can supply ready mixed, of the best sorts and proper proportions of each. The quantity usually sown is two bushels per acre. Per bushel, \$7.00

CLADIOLUS.

Splendid French and Belgian Hybrids of Gandavensis.

The new hybrid productions of the Gladiolus Gandavensis are, without doubt, the most superb flowering-bulbs in cultivation, producing their magnificent, long, and densely-flowered spikes of bloom, varying from white to rich salmon, and brilliant carmine, to the most intense scarlet or crimson. A single bulb will often give two or three stems of bloom, and a succession of flowers will be produced for two months. These splendid flowering bulbs are now considered unsurpassable ornaments, and one of the finest features of the flower-garden.

General Treatment.— The bulbs should be planted as soon as the ground is fairly dried in the spring, and all danger of frost is over; planting may be made every two weeks until the middle of June, to secure a succession of bloom. Plant the bulbs from two to for inches deep, according to their size; the soil should be enriched with well-decomposed manure, and well pulverized. The Gladiolus show to the best advantage when planted in beds four feet wide, setting the bulbs three-fourths of a foot apart each way. The plants should be well staked, and the bloom will be magnificent. When the frost has killed the leaves, or before if the leaves, by turning yellow, show the ripening of the bulb, the bulb should be taken up, dried rapidly in full sunlight, the new bulbs separated from the old and the flowering bulbs (the stocks being cut off about an inch from the cown of the bulb) put up in paper bags, carefully labeled. Should be kept during the winter in a dry, cool cellar, free from frost.

Purchasers will please state whether we may substitute, in the event of our being out of the varieties ordered.

Forwarded by mail to any address in the Union post-paid at catalogue prices.

NEW VARIETIES FOR 1868. Most of them offered for the First Time in this Country.

TO THE VEGETABLE GARDEN.

107

MUSHROOM SPAWN.

In Europe, the mushroom has long been an article of very common cultivation; while in this country, although it is so generally esteemed, very little attention has been paid to its artificial culture. It may be easily grown in a dry cellar or shed free from frost, or on beds out of doors. Short manure, fresh from the stable and dry, is the most suitable for forming the beds. It should be prepared by shaking well apart and laying it in a conical heap; this should be expected several times, at intervals of three or four days, until it has parted with its rank odor and burning quality, and is so tempered as to maintain an equable heat of about 60 degrees after the bed has been made up. In this operation, care should be taken that the manure does not become overheated before each turning over. When in the proper condition, make it into a bed about eighteen inches high, any convarient width, beating down the manure in the process of building, so as to make a firm, said bed; after which, ever with four inches of light, bunny soil. In a week or ten days the bed will be in a suitable condition for planting the spawn, which should be backen into pieces about the size of a hen's egg, and inserted, about six inches apart, a little below the surface. This done, cover the whole six inches thick with dry, clean, sweet hay. The mushrooms may be expected to appear in four to six weeks. Per pound, 25 cents.

DOUBLE TUBEROSES.

The Tuberose is one of the most delightfully fragrant and beautiful of summer-flowering bulbs, throwing up tail spikes of double white flowers, two or three feet high which remain in bloom a long period. The bulbs may be planted from February to May. When they are needed very early, they may be planted in the greenhouse or hot-bad in February or March; and, for a succession of flowers, in April and May. In planting, remove the useless, small offsets around the main root, and place a single timer in a pot four or five inches wide. Use good I sam and barfound, with good drainage. Start them slowly, upon a temperate heat, in thost-bod or foreing-pit, or later in the season, in a frame. Water slightly at first; and, when the bulbs begin to grow, increase the quantity. Those started early should be supplied with a good bottom heat till May, when they may be shifted into pots six or seven inches wide. By the first of June, all may be plunged out in a warm border, staking each plant to prevent their being broken by the wind. On the approach of cool weather, in September, those remaining in bloom should be removed to the conservatory or parlor, where they will continue in flower for a long period. Fine bulbs, \$2.00 per dozen.

TICRIDIAS.

A genus of Mexican bulbs; grows about one and a half feet high, producing flowers of the most exquisite beauty; the flowers large, about four inches across, of singularly curious shape, and the color of each variety gorgeous, and purely contrasted. No flower can exceed it in beauty. In bloom from July to the first of October. In autumn take up the bulbs, and keep them in a dry place, away from frost, until the time of planting in the spring.

LAWN GRASSES,

And Grasses for Especial Soils and Situations.

"No feature of a country residence," says a writer, "is more important than a good lawn." Without this a rural home is sadly deficient, however numerous and costly its other decorations may be. Every beautiful and complete country home should have for its base a broad, smooth, and wenter how. Flowers it may have, and trees, and shruls, and brilliant flowers: but it is the cheerful verdure and velvety texture of the lawn which give it character and refinement.

A good lawn is a work of art,—and does not come from mere accident. It must be DRAINED, that it may never become too damp and mossy; thoroughly ploughed, or SCBSOLLED, that the grass may send down its roots deep below the reach of drouth; and well PULVERIZED, and levelled, that the surface may be firm and smooth. Too much attention can not be given to these important preparations; for upon their completeness a good or bad lawn depends.

This being attended to, and the surface prepared by the removal of every weedy root and stone, and a good raking, the entire space, large or small, should be sown with the seed. Red top and white clearer make an excellent turf, two quarts of the latter and a busined of the former. But our prepared Mixture of Laws Gasss is far superior, as it contains several grasses which are not only of the softest texture, but are lasting, and of that fineness and evenness of growth which positions to the very best turf. This should be shown at the rate of two messages. To the acre. Choose a still day for this purpose, and a nice rolling completes the operation.

But a lawn must not be left to take care of itself. It should be mown every ten days or a

FORTNIGHT, and should always be rolled previously to mowing; or it may be cut oftener with a lawn-mower. Every fall or spring, it should have a light dressing of guano, at the rate of two hundred pounds to the acre, and a thorough rolling in the spring before the ground is too dry, that any loosening of the surface by frost may be made perfectly smooth and firm. If, at any time, the turf appears thin, a few seeds, scattered over the surface, will soon restore its natural growth and verdure. A lawn thus made, and properly cared for, will be a constant source of gratification.

When lawns are naturally very wet, or the soil unusually dry, the Lawn Grass Mixture may be varied to suit these conditions. By informing us of the nature of the soil, we can so alter the kinds of grass, as to give such as are best adapted for particular soils and locations.

and of grass, as to give such as are best adapted for particular sons and locations.	
Finest Lawn Grass, combining a mixture of the very finest dwarf evergreen varieties	
for lawns, cemeteries, etc., to be kept under the scythe, or lawn-mower. These	
grasses have given the most perfect satisfaction to all who have been supplied	
	\$7.00

GRASS SEEDS FOR PARTICULAR SOILS.	
Agrostis Stolonifera (Creeping Bent Grass.) This variety is well adapted for moist	
places, which some times overflow; fine for lawns or permanent pastures, on	
account of its growing earlier and later than other varieties. Per bushel	6.00
- Vulgaris (Red Top.) This valuable grass is well known throughout the Northern	0.00
and Middle States, generally sown with clover and Timothy. Market price	
per Ib.	
A COLOR OF THE COL	
Alopecurus Pratensis (Meadow Fox-tail.) A very useful variety for pastures;	
closely resembling Timothy, but may be distinguished from it as having one	
palea only; grows quickly and very early, succeeding best in meadow land	
Per fb	.80
Anthoxanthum Odoratum (Sweet-Scented Vernal Grass.) This is one of the earliest	
spring, as well as one of the latest in the autumn, and is almost the only grass	
that is fragrant. It yields but a moderate crop, yet it should be planted freely	
on account of its quality for feeding green, or cut for hay	1.00
Dactylis Glomerata (Orchard Grass.) This is one of the most valuable and widely-	
known of all the pasture grasses. Its rapidity of growth, the luxuriance of its	
aftermath, and its power of enduring the cropping of cattle, commend it	
highly. It should be fed close to prevent it running to seed, when it loses a	
large proportion of its nutritive matter. All kinds of stock eat it greedily when	
	8,50
	0.00
Festuca Duriuscula (Hard Fescue.) A fine variety, suitable for lawns and pastures;	
growing well in most any kind of soil, particularly dry soils; fine foliage,	
adapted for sheep-grazing; should be planted with Festuca Pratensis and Poa	
Trivialis. Per fb	.50
Pratensis (Meadow Fescue.) One of the most common of the Fescue grasses, said	
to be the Randall Grass of Virginia. An excellent pasture grass, forming a	
very considerable portion of the turf of old pastures and fields. In addition to	
its qualities as a pasture grass, it is said to make a very good quality of hay.	
Thriving in any soil. Per tb	.60
- Ovina (Sheep Fiscue.) This is much used by the English for sheep-pastures;	.00
yields but a moderate crop, and is only recommended for sheep-pastures, as	
they are very fond of it. It improves the flavor of mutton very much	60
Tolism Parama (English Para Carry)	.60
Lolium Perenne (English Rye Grass.) A very valuable variety for permanent	
pasture; best adapted for moist land. Very nutritious. Per bushel	5.00
- Italicum (Italian Rye Grass.) This variety has been lately introduced. Said to	
be superior to the perennial Rye Grass; excellent for early sheep feeding. Per	
bushel	5.00
Poa Trivialis (Rough-stalked Meadow Grass.) This is a valuable grass to cultivate	
in moist, sheltered soils, possessing very considerable nutritive qualities; when	
sown with other varieties, it yields more than an average crop. Per fb.	.80
- Nemoralis (Wood Meadow Grass.) This is certainly to be classed among the good	
shaded pasture-grasses, furnishing a fine succulent and very nutritive herbage	
much recommend for pleasure grounds, particularly under trees. Per fb.	.75
— Pratensis (Kentucky Blue Grass, or June Grass.) This is an early grass, very	. 10
common in the soils of New England and the West, and highly recommended	
common in the sons of New England and the West, and highly recommended	

for lawns; grows well in dry gravelly soils; very nutritive for all kinds of grazing stock. Per bushel from \$4.50 to 8.00

BEDDING PLANTS.

A collection of one hundred thousand of the leading and most beautiful kinds of bedding plants, well rooted, and packed for transportation to any part of the country. Price from \$1.00 to \$3.00 per dozen.

BULBS, Etc., for Planting in Spring.	7.
Cannas. Beautiful foliaged plants, with scarlet flowers	n.
Dahlias. Upwards of two hundred choice varieties	
Erythina, or Coral Tree. Spikes of Large, dark crimson flowers	
Gladiolus Floribundus. White and pink	
- Gandavensis. Scarlet and orange	
- Ramosus. Mixed colors	
Tigridia Pavonia (Mexican Tiger Flower.) Red spotted	
- Conchiftora. Yellow, spotted with crimson	
Tuberose, Double Italian. White, very fragrant	
Maderia Vine. A beautiful summer climbing plant, of rapid growth, completely	
covered with long graceful racemes of deliciously fragrant white flowers15 to	.25
Apios Tuberosa. A native hardy climbing plant of quick growth, with dense clusters	
of brownish red or purple flowers	.50
Commelina callestis. With sky-blue flowers, planted out in May, and blooming all	
summer	.25
Amaryllis formosissima. A brilliant summer-flowering bulb, with velvety crimson	
	.25
Calocasa, or Caladium esculentum. With foliage four feet long and two broad. 50 to 1	.00
Dielytra spectabilis. A well-known and beautiful hardy plant, with racemes of	
delicate pink flowers, \$3.00 to \$4.00 per dozen.	

SPLENDID DOUBLE DAHLIAS.

Our collection is one of the most extensive in the country, the culture of the Dahlia having been made a specialty. Our assortment includes all the old and popular kinds, with the addition of all the leading PRIZE varieties of England, and the fancy varieties of the French and German cultivators, comprising the Lilliputians, now so universally admired. Plants in pots will be ready for delivery in May, and dry roots after October 1.

Finest new varieties of last year, now first offered \$1.00 each; \$9.00 per doz. Splendid varieties of previous years, all fine. 30cts. each; \$3.00 per doz. Unnamed varieties, good assortment of various colors. \$2 per doz.

CANNAS.

One of the most stately and showy classes of plants, attaining the height of six feet; with immense foliage, and large spikes of yellow, orange, or scarlet flowers. Planted in groups, the massive foliage and showy blossoms have a majestic effect in the garden or upon the lawn.

Six distinct varieties. \$4.00.

Six distinct varieties. \$3.00 to \$12.00 per doz.

DAHLIA POLES.

Of various lengths, from 2 to 6 feet; painted. These are also suitable for gladiolus, and all tall plants requiring neat stakes. Price from \$6 to \$20 per hundred.

CUBA BASS.

Of the best qualities, for tying up plants, grape-vines, etc.; in large or small quantities, per 15, \$1.25.

OSACE ORANGE.

DIRECTIONS FOR SPROUTING. — Put the seed in a vessel, and cover it with water as warm as you can bear to your hand; keep the vessel near the stove, change the water once a day, and soak the seed about five days, after which turn off the water and keep the vessel covered with a damp cloth; stir occasionally, and in about one week more, if kept warm, it will begin to start, and should then be planted in ground well prepared to receive the seed. Plant in drills about two inches deep, as soon as the weather will permit.

For sale in large or small quantities, at lowest market prices.

LIST OF FARMING AND CARDEN IMPLEMENTS.

HAY, STRAW AND CORN-STALK CUTTERS, CIDER-MILLS (various kinds), PLOUGHS, CULTIVATORS, WHEELBARROWS, HARROWS, FANNING-MILLS, Etc.

New and

Improved

AUGER.

THE BEST

EVER INVENTED.

WHALE OIL SOAP.

An effectual remedy for destroying Insects on trees, plants, vines, etc.

FOR WASHING DOWN THE BARK OF TREES, GRAPE VINES, ETC. — Take a quarter of a pound of the Soap, four pounds Sulphur, a quarter of a pound of Tobacco, one ounce Nux Vomica; pour over these three gallons boiling water; stir until thoroughly mixed; when cool, apply with a brush.

SAPO TOBACUM SOAP,

For killing Insects on plants. 50 cts. per Tb.

FOR DESTROYING THE APHIS OR PLANT LOUSE, SLUGS ON ROSES, THRIPS ON GRAPE VINES, MILDEW, SLUGS ON PEAR TREES. — The a quarter of a pound of the Soap, dissolve thoroughly with boiling water, add in all two gallons of water. Strain through a seive or cloth; apply with a syringe, or the rose of a watering-pot, to the plants. The best time to apply the preparation is in the evening, or quite early in the morning.

FRUIT AND ORNAMENTAL TREES, Etc.

We can supply all the best varieties of

FRUIT TREES,
GOOSEBERRIES,

GRAPE VINES, RASPBERRIES, CURRANTS, STRAWBERRIES,

Embracing many new sorts, also,

ORNAMENTAL TREES AND SHRUBS, VINES, EVERGREEN TREES, ROSES, Etc., Etc.

Also, an extensive collection of the choicest

Greenhouse Plants, Dahlias, Verbenas, Carnations and Picotees, Phloxes, Pæonies.

And a large collection of HARDY HERBACEOUS PLANTS, Etc., Etc.

HANCING BASKETS, VASES, Etc.

The growing of plants in Hanging Vases has become quite popular. They are made of various forms and materials, from the common Earthenware to the finest China, German and Terra Cotta, ornamental and gilt; also of wire and rustic, varying in price from twenty-five cents to five dollars each. We also have a beautiful assortment of

GERMAN, LAVA AND TERRA COTTA GOODS,

In various forms, for Flowers and Plants, Fish Stands and Globes, Aquariums, Fern Cases, Glass Shades, etc., etc.

We would also call attention to the

ART OF PRESERVING FLOWERS, BRIDAL BOUQUETS, FUNERAL WREATHS AND CROSSES, preserved to retain their natural appearance.

WEATHER VANES.

Nothing adds so much beauty and finish to a fine residence as a neat and well-proportioned vane on the barn or stable, and so useful an ornament is considered almost indispensable. Our vanes are made of the best copper, and glided with the best gold leaf, and made in a great variety of forms. We therefore invite your special attention, to call and examine for yourselves.

FLOWERING BULBS.

For Planting in Autumn, and for Sale during September, October, and November.

Among ornamental plants none are more truly beautiful and attractive than those comprised in the extensive class of Flowering Bulbs. Their brilliant and showy colors, delicious fragrance various seasons of blooming, and easy culture, combine to render them exceeding popular and

valuable for decorating the garden, greenhouse, conservatory, or parlor.

We import all our fall bulbs direct from the most celebrated florists in Holland; we can

recommend the bulbs we offer with the greatest confidence in their superior qualities. Purchasers who are unacquainted with the various kinds of bulbs, suitable for either outdoor or indoor culture, and wish to leave the selection to us, may rely on our executing their orders in the best manner, simply stating whether they are for pot, glass, or garden culture.

For General Catalogue of Bulbs, send for Bulb Catalogue.

THE HYACINTH.

Hyacinths are among the most beautiful of winter or early spring flowering plants, adorning alike the parlor, the greenhouse, and the garden, with their delightfully fragrant blossoms, of various colors and tints, at a season when few other plants are in flower. They are also among the most easily cultivated, growing either in sand, moss, water, or earth, in pots, or glasses, or baskets, producing in either as beautiful spikes of flowers as when growing in the open ground.

There are a variety of opinions in regard to the relative beauty of the single and double Hyacinth; some cultivators fancying the single, while others prefer the double. More depends upon the form and general outline of the whole spike of bloom, than upon the individual flowers of which it is composed; both are beautiful, and each possesses merits of its own. The bells of the double varieties are often larger than the single, while those of the latter are much more numerous, and the spikes of bloom more compact and symmetrical. The single sorts are also earlier, bloom freely, and are best adapted for the more artificial modes of culture in water, sand, etc.

For those who desire our Bulb Catalogue, containing a full list of all the various shades and colors of the Hyacinth, one will be sent on application.

Double, Single and named Red-various shades.

Double, Single and named White-various shades.

Double and Single Yellow-various shades.

Double and Single Blue-various shades.

Mixed Hyacinths. These include all the different shades of color mixed.

CROCUS.

As one of the earliest of spring flowers, often displaying its blossoms in a sunny spot while the snow yet covers the ground, the Crocus is a universal favorite. Dwarf and compact in habit of growth, combining in its present improved state all the essential shades of color for producing harmonious effect, and flourishing well in all soils and situations, it is the flower of the million. One of the great characteristics of the Crocus is its suitability for planting near the margin, or edges, of flower borders, beds, etc., where it does not require removal; or for forming lines and fancy groups, arranged in the order of their colors, in prominent positions, where, after blooming, they may be removed, and their place filled with bedding-plants or annuals. For lawns, where they approach the house, for sunny banks, and the front yards of city houses, where there are but a few yards of grass or border, they are admirable ornaments, sending up masses of yellow, blue, white, or variegated colors as soon as the snow leaves the ground, and the warm rays of the spring sun bring them into life and beauty. There are few objects which are more pleasant to the city pedestrian than a mass of Crocus blossoms in the sunny border of the city garden in March, while the pavements are yet covered with ice. what gives greater attractiveness to the parlor window than a few pots of Crocus, studded with blossoms, reminding us of the coming summer?

In addition to the above, we also have a fine assortment of Lillies, in great varieties, also Polyanthus Narcissus, Garden Narcissus, Lilly of the Valley, Jonquils, English Iris, Gladiolus, Pæonies, Tuberoses, etc.

TULIPS.

The Tulip, of all bulbous flowers, is the most celebrated, popular, brilliant and beautiful, and has ever been prized by all florists as the most decorative and showy of spring flowers; and not simply for effect alone, for many of the choice kinds have a delicacy of penciling, and richness of tinting, which excel all other plants. They are easy of culture, both in the conservatory or parlor and the open garden; and, as they thrive in almost any good soil, and are perfectly hardy, they can well claim a prominent rank among hardy bulbs.

Their cultivation is yet so limited, that their real beauty is not generally recognized. A few bulbs scattered here and there produce but little effect; but when planted in beds or masses, or in small groups, they become at once grand and brilliant, and eclipse, in real variety of color-

ing and picturesque effect, almost any other flower.

EARLY DWARF DUC VAN THOLL TULIPS.

The Duc Van Tholls are universally admired for their neat dwarf habit of growth, and the brilliant color of their early flowers. They are the earliest of all the Tulips, and on this account finely adapted for blooming in winter; will grow and bloom freely in the smallest pots, or in sand, moss, or water. The best effect is produced by planting in large pots, six, twelve, or more bulbs of the different colors. If planted in October, they may be had in bloom early in January.

In the open garden they bloom in April, often in company with the Crocus and Hyacinth, and in fancy flower beds, or groups composed of the different varieties, produce a truly beauti-

Finest Named Varieties. Our selection, 20c each, per doz. . . \$1.50 to \$2.00

EARLY SPRING TULIPS.

These commence to bloom early in May, and continue in bloom until the late varieties come in. They are remarkable for their rich colors and beautiful markings, and for real brilliancy and splendid effect are unsurpassed. Those who have not seen a fine collection of this class of tulips in bloom, can not be aware of their great attractiveness and beauty.

They may be cultivated in pots or baskets, in moss or sand, or even water, in the same manner we have recommended for the Hyacinth. Three bulbs in a six-inch pot will be sufficient. In the open garden they should be planted six inches apart, and about four inches deep.

Though entirely hardy, they will flower stronger if covered with two or three inches of old

hay, leaves or coarse straw manure. Plant in October and November.

Finest Named Varieties, our selection, per doz. . . . Good Mixed Varieties, of various colors . . .

EARLY FLOWERING DOUBLE TULIPS.

Though the Double Tulip has not been so highly prized by Tulip fanciers, it is, nevertheless, for garden purposes a magnificent flower, of unusual size, very double, and presenting a grand mass of varied and rich colors. They require the same treatment as the single varieties, and are, like those, adapted for growing in pots or the open border. Plant in October or November

TULIPS. PARROT

These are picturesque and showy flowers, of brilliant shades of scarlet, crimson yellow, and green, curiously intermixed and variegated, and form very attractive groups for flower borders. Various Mixed Colors, each, 10c. per doz. . .

CROWN IMPERIALS.

Showy and favorite flowers, which are now becoming very popular and generally cultivated. They not only have the merits of early blooming, but their tall stems, ornamented with tufts of large pendant flowers, surmounted with its crown of green leaves, render it conspicuous and highly effective as a border flower. It grows from two to four feet high, and, scattered singly through the shrubberies, or planted in groups or masses, it forms a very pleasing feature of the flower garden. Plant in October or November, three or four inches deep.

From 50cts. to \$1 each.

SHOWDROPS.

The pretty Snowdrop, "in habit white and plain," is the first of all flowers to herald the approach of spring. Long before any other flower, it shoots up its slender stem, and displays its white drooping corols, while the spottless snow still covers the shady recesses of the garden. They flourish well in any soil, and bloom best if not disturbed oftener than every three years. Like the Crocus, they should be planted in little groups of ten to twenty, when they shoot up and form masses of pure white blossoms. Being dwarf, they should, when planted in the garden, be set near the edge of walks, where they show to advantage. For lawns they are particularly valuable, and continue to bloom without any care for years in succession. The constant cutting of the grass does not injure them, and they have a highly decorative appearance. They also flourish well in sand or moss, or in pots or baskets.

Plant one inch apart, and two inches deep.
